- Favorable stock selection in the materials sector bolstered the Fund’s relative performance, as did positioning and stock selection in industrials, specifically out-of-Index stock selection within electrical equipment.
- Secondary positive contributors included stock selection within the utilities sector and underweight exposure to real estate.
- Unfavorable stock selection within financials, along with overweight exposure and stock selection in health care and stock selection within energy, detracted most from the Fund’s relative returns.
- Secondary detractors included disappointing stock selection in consumer staples and consumer discretionary.
