Active Share measures the percentage of a fund that is invested in securities, or is weighted, differently from the benchmark index, in an attempt to outperform, and can range from 0% (tracks index exactly) to 100% (completely active versus benchmark). Depending on the index and asset class, it indicates the degree to which a portfolio's weightings vary from its stated primary benchmark. Active Share may be a useful metric for investors to consider, along with other information, to evaluate whether to invest in a particular fund, but it does not serve as a predictor of excess return or manager skill.

The data quoted represents past performance, which is no guarantee of future results. Visit im.bnymellon.com for the funds' most recent month-end performance figures and portfolio holdings.

Investors should consider the investment objectives, risks, charges and expenses of a mutual fund carefully before investing. To obtain a prospectus, or a summary prospectus, if available, that contains this and other information about a fund, contact your financial professional. For more information, call 1-800-373-9387 or visit im.bnymellon.com. Read the prospectus carefully before investing.

RISKS

Asset allocation and diversification cannot assure a profit or protect against loss. **Bonds** are subject to interest-rate, credit, liquidity, call and market risks, to varying degrees. Generally, all other factors being equal, bond prices are inversely related to interest-rate changes and rate increases can cause price declines. **Equities** are subject to market, market sector, market liquidity, issuer, and investment style risks, to varying degrees. There is no guarantee that dividend-paying companies will continue to pay, or increase, their dividend. **Investing in foreign denominated and/or domiciled securities** involves special risks, including changes in currency exchange rates, political, economic, and social instability, limited company information, differing auditing and legal standards, and less market liquidity. These risks generally are greater with emerging market countries.
