Fund Summary

Investment Objective

The fund seeks high total return (consisting of income and capital appreciation) consistent with the preservation of capital.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
Management fees	0.40%
Distribution and service (12b-1) fees	None
Other expenses ¹	0.00%
Total annual fund operating expenses	0.40%

¹ "Other expenses" are based on estimated amounts for the current fiscal year.

Example

The Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then hold or redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$41	\$128

Portfolio Turnover

The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the fund's performance. The fund is new and does not yet have a portfolio turnover rate to disclose.

Principal Investment Strategy

To pursue its goal, the fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in fixed-income securities. The fixed-income securities in which the fund invests principally include bonds, notes (including structured notes), mortgage-related securities, asset-backed securities, floating rate loans (limited to up to 20% of the fund's net assets) and other floating rate securities, and Eurodollar and Yankee dollar instruments.

In constructing the fund's portfolio, the fund's sub-adviser, Insight North America LLC (sub-adviser), focuses on identifying undervalued fixed-income markets, currencies, sectors and securities. The sub-adviser looks for fixed-income securities with the most potential for added value, such as those with the potential for credit upgrades, unique structural characteristics, or innovative features. The sub-adviser selects securities by using fundamental economic research and quantitative analysis to allocate assets among countries and currencies, and by actively trading among sectors and securities, focusing on sectors and individual securities that it considers to be relatively undervalued.

The fund generally invests in eight or more countries, but always invests in at least three countries, one of which may be the United States. At times, the fund may invest a substantial part of its assets in any one country, including the United States; however, the fund will not invest more than 70% of its assets, at the time of purchase, in the United States. The fund may invest up to 40% of its assets in emerging markets. The fund considers an emerging market country to be a

country that, at the time of purchase, is (i) classified as an emerging, frontier or developing economy by any supranational organization (such as the World Bank, International Monetary Fund, United Nations, or related entities), or (ii) considered an emerging market country for purposes of constructing a major emerging or frontier market securities index (such as J.P. Morgan, Bloomberg, or ICE emerging market indices). The fund will hedge most, but not necessarily all, of its foreign currency exposure to protect the U.S. dollar value of the fund's assets, principally by using forward contracts, futures contracts and swap agreements.

The fund normally invests primarily in fixed-income securities rated investment grade (i.e., Baa3/BBB- or higher) at the time of purchase or, if unrated, determined to be of comparable quality by the fund's sub-adviser. The fund, however, may invest up to 25% of its assets in fixed-income securities rated, at the time of purchase, below investment grade ("high yield" or "junk" bonds), but not rated lower than B, or the unrated equivalent as determined by the fund's sub-adviser. Under normal market conditions, the average credit quality of the fund's portfolio will be A3/A- or higher.

There are no restrictions on the dollar-weighted average maturity or average effective duration of the fund's portfolio or on the maturities or durations of the individual fixed-income securities the fund may purchase. A bond's maturity is the length of time until the principal must be fully repaid with interest. Duration is an indication of an investment's "interest rate risk," or how sensitive a bond or the fund's portfolio may be to changes in interest rates.

The fund typically will sell a security if the fund's sub-adviser believes the security is overvalued from a valuation standpoint, another sector becomes relatively more attractive, and/or the sub-adviser expects the issuer's fundamentals to deteriorate. The fund does not have any limitations regarding portfolio turnover and may engage in short-term trading in seeking to achieve its investment objective.

As noted above, the fund will use derivatives to hedge most, but not necessarily all, of its foreign currency exposure. The fund may also, but is not required to, use derivative instruments as a substitute for investing directly in an underlying asset, to increase returns, to manage market, foreign currency, duration, credit or interest rate risks, as part of a hedging strategy, or for other purposes related to the management of the fund. The derivative instruments in which the fund may invest typically include options, futures, options on futures, forward contracts and swap agreements.

Principal Risks

An investment in the fund is not a bank deposit. It is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. It is not a complete investment program. The fund's share price fluctuates, sometimes dramatically, which means you could lose money.

- *Fixed-income market risk:* The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). Federal Reserve policy in response to market conditions, including with respect to interest rates, may adversely affect the value, volatility and liquidity of dividend and interest paying securities. Policy and legislative changes worldwide are affecting many aspects of financial regulation. The impact of these changes on the markets and the practical implications for market participants may not be fully known for some time.
- *Interest rate risk:* Prices of bonds and other fixed rate fixed-income securities tend to move inversely with changes in interest rates. Typically, a rise in rates will adversely affect fixed-income securities and, accordingly, will cause the value of the fund's investments in these securities to decline. A wide variety of market factors can cause interest rates to rise, including central bank monetary policy, rising inflation and changes in general economic conditions. It is difficult to predict the pace at which central banks or monetary authorities may increase (or decrease) interest rates or the timing, frequency, or magnitude of such changes. During periods of very low interest rates, which occur from time to time due to market forces or actions of governments and/or their central banks, including the Board of Governors of the Federal Reserve System in the U.S., the fund may be subject to a greater risk of principal decline from rising interest rates. When interest rates fall, the values of already-issued fixed rate fixed-income securities generally rise. However, when interest rates fall, the fund's investments in new securities may be at lower yields and may reduce the fund's income. Changing interest rates may have unpredictable effects on markets, may result in heightened market volatility and may detract from fund performance. The magnitude of these fluctuations in the market price of fixed-income securities is generally greater for securities with longer effective maturities and durations because such instruments do not mature, reset interest rates or become callable for longer periods of time. Unlike investment grade bonds, however, the prices of high yield ("junk") bonds may fluctuate unpredictably and not necessarily inversely with changes in interest rates.

- *Credit risk:* Failure of an issuer of a security to make timely interest or principal payments when due, or a decline or perception of a decline in the credit quality of the security, can cause the security's price to fall, lowering the value of the fund's investment in such security. The lower a security's credit rating, the greater the chance that the issuer of the security will default or fail to meet its payment obligations.
- *High yield securities risk:* High yield ("junk") securities involve greater credit risk, including the risk of default, than investment grade securities, and are considered predominantly speculative with respect to the issuer's ability to make principal and interest payments. The prices of high yield securities can fall in response to adverse changes in general economic conditions, to changes in the financial condition of the securities' issuers, and to changes in interest rates to a greater extent than those of higher rated securities.
- *Government securities risk:* Not all obligations of the U.S. government, its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Some obligations are backed only by the credit of the issuing agency or instrumentality, and in some cases there may be some risk of default by the issuer. Any guarantee by the U.S. government or its agencies or instrumentalities of a security held by the fund does not apply to the market value of such security or to shares of the fund itself. A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity.
- *Mortgage-backed securities risk:* Mortgage-backed securities represent a participation in, or are secured by, mortgage loans. Certain of the mortgage-backed securities in which the fund may invest are not backed by the full faith and credit of the U.S. government and there can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities where it was not obligated to do so. Mortgage-backed securities tend to increase in value less than other debt securities when interest rates decline, but are subject to similar or greater risk of decline in market value during periods of rising interest rates. Because of prepayment and extension risk, mortgage-backed securities react differently to changes in interest rates than other bonds. Small movements in interest rates may quickly and significantly affect the value of certain mortgage-backed securities. Transactions in mortgage-backed pass-through securities often occur through TBA transactions. Default by or bankruptcy of a counterparty to a TBA transaction could expose the fund to possible losses because of an adverse market action, expenses, or delays in connection with the purchase or sale of the pools of mortgage-backed pass-through securities specified in the TBA transaction.
- *Asset-backed securities risk:* Asset-backed securities are typically structured like mortgage-backed securities, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include, for example, items such as motor vehicle installment sales or installment loan contracts, leases on various types of real and personal property, and receivables from credit card agreements. General downturns in the economy could cause the value of asset-backed securities to fall. In addition, asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may provide the fund with a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.
- *Eurodollar and Yankee Dollar investments risk:* Eurodollar investments are U.S. dollar-denominated instruments issued by foreign corporate and government issuers and are generally held in banks outside the United States, primarily in Europe. Yankee Dollar investments are U.S. dollar-denominated instruments typically issued in the United States by foreign governments and their agencies and foreign banks and corporations. These investments involve risks similar to the risks of investing in foreign securities, including potential unfavorable political and economic developments, foreign withholding or other taxes, seizure of foreign deposits, currency controls, interest limitations or other governmental restrictions which might affect payment of principal or interest.
- *Prepayment and extension risk:* When interest rates fall, the principal on mortgage-backed and certain asset-backed securities may be prepaid. The loss of higher yielding underlying mortgages and the reinvestment of proceeds at lower interest rates can reduce the fund's potential price gain in response to falling interest rates, reduce the fund's yield, or cause the fund's share price to fall. When interest rates rise, the effective duration of the fund's mortgage-backed and other asset-backed securities may lengthen due to a drop in prepayments of the underlying mortgages or other assets. This is known as extension risk and would increase the fund's sensitivity to rising interest rates and its potential for price declines.
- *Call risk:* Some securities give the issuer the option to prepay or call the securities before their maturity date, which may reduce the market value of the security and the anticipated yield-to-maturity. Issuers often exercise this right when interest rates fall. If an issuer "calls" its securities during a time of declining interest rates, the fund might have to reinvest the proceeds in an investment offering a lower yield, and therefore might not benefit from any increase in value as a result of declining interest rates. During periods of market illiquidity or rising interest rates, prices of "callable" issues are subject to increased price fluctuation.
- *Foreign investment risk:* To the extent the fund invests in foreign securities, the fund's performance will be influenced by political, social and economic factors affecting investments in foreign issuers. Special risks associated with

investments in foreign issuers include exposure to currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political and economic instability and differing auditing and legal standards. The imposition of sanctions, confiscations, trade restrictions (including tariffs) and other government restrictions by the United States and other governments, or problems related to share registration, trade settlement, or asset custody, may result in losses for the fund. To the extent securities held by the fund trade in a market that is closed when the exchange on which the fund's shares trade is open, there may be deviations between the current price of a security and the last quoted price for the security in the closed foreign market. These deviations could result in the fund experiencing premiums or discounts greater than those of ETFs that invest in domestic securities.

- *Foreign government obligations, debt obligations of supranational entities and sovereign debt obligations risk:* Investing in foreign government obligations, debt obligations of supranational entities and the sovereign debt of foreign countries creates exposure to the direct or indirect consequences of political, social or economic changes in the countries that issue the securities or in which the issuers are located. A governmental obligor may default on its obligations.
- *Foreign currency risk:* Investments in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Currency exchange rates may fluctuate significantly over short periods of time. Foreign currencies are also subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government intervention and controls.
- *Emerging market risk:* The securities of issuers located or doing substantial business in emerging market countries tend to be more volatile and less liquid than the securities of issuers located in countries with more mature economies. There may be less information publicly available about an emerging market issuer than about a developed market issuer and/or the available information may be outdated or unreliable. In addition, emerging market issuers may not be subject to accounting, auditing, legal and financial reporting standards comparable to those in developed markets, potentially making it difficult to evaluate such issuers. Emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Additionally, investments in these countries may have restrictions that make it difficult or impossible for the fund to exercise rights, pursue legal remedies, and obtain judgements in foreign courts. Investments in these countries may be subject to political, economic, legal, market and currency risks. The risks may include less protection of property rights and uncertain political and economic policies, greater vulnerability to market manipulation, the imposition of capital controls and/or foreign investment limitations by a country, nationalization of businesses and the imposition of sanctions by other countries, such as the United States.
- *Liquidity risk:* When there is little or no active trading market for specific types of securities, it can become more difficult to sell the securities in a timely manner at or near their perceived value. In such a market, the value of such securities and the fund's share price may fall dramatically. Investments that are illiquid or that trade in lower volumes may be more difficult to value. Investments in foreign securities, particularly those of issuers located in emerging markets, tend to have greater exposure to liquidity risk than domestic securities. The market for below investment grade securities may be less liquid and therefore these securities may be harder to value or sell at an acceptable price, especially during times of market volatility or decline. Liquidity can also decline unpredictably in response to overall economic conditions or credit tightening. In addition, in stressed market conditions the market for the fund's shares may become less liquid in response to deteriorating liquidity with respect to the fund's portfolio securities, which could lead to differences between the market price of the fund's shares and the net asset value of the fund's shares.
- *Issuer risk:* A security's market value may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's products or services, or factors that affect the issuer's industry, such as labor shortages or increased production costs and competitive conditions within an industry.
- *Market risk:* The value of the securities in which the fund invests may be affected by political, regulatory, economic and social developments, and developments that impact specific economic sectors, industries or segments of the market. In addition, turbulence in financial markets and reduced liquidity in equity, credit and/or fixed-income markets may negatively affect many issuers, which could adversely affect the fund. Global economies and financial markets are becoming increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. These risks may be magnified if certain events or developments adversely interrupt the global supply chain; in these and other circumstances, such risks might affect companies world-wide. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the fund and its investments. To the extent the fund may overweight its investments in certain countries, companies, industries or sectors, such positions will increase the fund's exposure to risk of loss from adverse developments affecting those countries, companies, industries or sectors.

- *Structured notes risk:* Structured notes, a type of derivative instrument, can be volatile, and the possibility of default by the financial institution or counterparty may be greater for these instruments than for other types of derivative instruments. Structured notes typically are purchased in privately negotiated transactions from financial institutions and, thus, an active trading market for such instruments may not exist.
- *Derivatives risk:* A small investment in derivatives could have a potentially large impact on the fund's performance. The use of derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets, and the fund's use of derivatives may result in losses to the fund. Derivatives in which the fund may invest can be highly volatile, illiquid and difficult to value, and there is the risk that changes in the value of a derivative held by the fund will not correlate with the underlying assets or the fund's other investments in the manner intended. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment, and involve greater risks than the underlying assets because, in addition to general market risks, they are subject to liquidity risk (lack of a liquid secondary market), credit and counterparty risk (failure of the counterparty to the derivatives transaction to honor its obligation) and pricing risk (risk that the derivative cannot or will not be accurately valued).
- *Futures risk:* The value of a futures contract tends to increase and decrease in correlation with the value of the underlying instrument. Risks of futures contracts may arise from an imperfect correlation between movements in the price of the futures and the price of the underlying instrument. The fund's use of futures contracts exposes the fund to leverage risk because of the small margin requirements relative to the value of the futures contract. A relatively small market movement will have a proportionately larger impact on the funds that the fund has deposited or will have to deposit with a broker to maintain its futures position. While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. Futures exchanges may impose daily or intraday price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, the fund may be unable to close out its futures contracts at a time that is advantageous. The price of futures can be highly volatile; using them could lower total return, and the potential loss from futures could exceed the fund's initial investment in such contracts.
- *Options risk:* The fund's successful use of options depends on the ability of the sub-adviser to forecast market movements correctly. When the fund purchases an option, it runs the risk that it will lose its entire investment in the option in a relatively short period of time, unless the fund exercises the option or enters into a closing sale transaction before the option's expiration. If the price of the underlying security does not rise (in the case of a call) or fall (in the case of a put) to an extent sufficient to cover the option premium and transaction costs, the fund will lose part or all of its investment in the option. The effective use of options also depends on the fund's ability to terminate option positions at times when the sub-adviser deems it desirable to do so. There is no assurance that the fund will be able to effect closing transactions at any particular time or at an acceptable price. The sale of options by the fund may create investment leverage.
- *Swap risk:* A swap is a contract that generally obligates the parties to exchange payments based on a specified security, basket of securities, or securities indices during a specified period. Swaps can involve greater risks than direct investment in securities because swaps may be leveraged and are subject to counterparty risk (e.g., the risk of a counterparty's defaulting on the obligation or bankruptcy), credit risk and pricing risk (i.e., swaps may be difficult to value). It may not be possible for the fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.
- *Currency forward risk:* Currency forward contracts are derivative instruments pursuant to a contract with a counterparty to buy or sell a specific currency at a future date at a price set at the time of the contract. Not all forward contracts require a counterparty to post collateral, which may expose the fund to greater losses in the event of a default by a counterparty. Foreign currency forward transactions include risks associated with fluctuations in foreign currency.
- *Floating rate loan risk:* Unlike publicly traded common stocks which trade on national exchanges, there is no central market or exchange for loans to trade. Loans trade in an over-the-counter market, and confirmation and settlement, which are effected through standardized procedures and documentation, may take significantly longer than seven days to complete. The lack of an active trading market for certain floating rate loans may impair the ability of the fund to realize full value in the event of the need to sell a floating rate loan and may make it difficult to value such loans. There may be less readily available, reliable information about certain floating rate loans than is the case for many other types of securities, and the fund's portfolio managers may be required to rely primarily on their own evaluation of a borrower's credit quality rather than on any available independent sources. The value of collateral, if any, securing a floating rate loan can decline, and may be insufficient to meet the issuer's obligations in the event of non-payment of scheduled interest or principal or may be difficult to readily liquidate. The floating rate loans in which the fund may invest typically will be below investment grade quality and, like other below investment grade securities, are inherently speculative. As a result, the risks associated with such floating rate loans are similar to the risks of below investment grade securities, although senior loans are typically senior and secured in contrast to other below investment grade securities, which are often subordinated and unsecured.

- *Management risk:* The investment process and techniques used by the fund's sub-adviser could fail to achieve the fund's investment goal and may cause your fund investment to lose value or may cause the fund to underperform other funds with similar investment goals.
- *Cash transaction risk:* Most ETFs generally make in-kind redemptions to avoid being taxed at the fund level on gains on the distributed portfolio securities. However, unlike most ETFs, the fund currently intends to effect redemptions for cash, rather than in-kind, because of the nature of the fund's investments. As such, the fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds, which includes cash transaction costs. Therefore, the fund may recognize a capital gain on these sales that might not have been incurred if the fund had made a redemption in-kind. This may decrease the tax efficiency of the fund compared to ETFs that utilize an in-kind redemption process, and there may be a substantial difference in the after-tax rate of return between the fund and conventional ETFs.
- *Authorized participants, market makers and liquidity providers risk:* The fund has a limited number of financial institutions that may act as Authorized Participants, which are responsible for the creation and redemption activity for the fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, fund shares may trade at a material discount to net asset value and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable or unwilling to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Fluctuation of net asset value, share premiums and discounts risk:* As with all exchange-traded funds, fund shares may be bought and sold in the secondary market at market prices. The trading prices of fund shares in the secondary market may differ from the fund's daily net asset value per share and there may be times when the market price of the shares is more than the net asset value per share (premium) or less than the net asset value per share (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- *Trading issues risk:* Although fund shares are listed for trading on an exchange and may be listed or traded on other U.S. and non-U.S. stock exchanges as well, there can be no assurance that an active trading market for such fund shares will develop or be maintained. Trading in fund shares may be halted due to market conditions or for reasons that, in the view of the listing exchange, make trading in fund shares inadvisable. In addition, trading in fund shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange "circuit breaker" rules. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the fund will continue to be met or will remain unchanged or that fund shares will trade with any volume, or at all, on any stock exchange.
- *Portfolio turnover risk:* The fund may engage in short-term trading which could produce higher transaction costs and taxable distributions, and lower the fund's after-tax performance.
- *New fund risk:* The fund is newly organized with limited operating history and there can be no assurance that the fund will grow to or maintain sufficient assets to achieve investment and trading efficiencies.

Performance

Since the fund does not have a full calendar year of operations, past performance information for the fund is not presented in this prospectus. Annual performance returns provide some indication of the risks of investing in the fund by showing changes in performance from year to year. Comparison of fund performance to an appropriate index indicates how the fund's average annual returns compare with those of a broad measure of market performance. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Recent performance information may be available at www.bny.com/investments.

Portfolio Management

The fund's investment adviser is BNY Mellon ETF Investment Adviser, LLC and the fund's sub-adviser is Insight North America LLC (INA), an affiliate of the Adviser.

Brendan Murphy, CFA, Nathaniel Hyde, CFA, Adam Whiteley, CFA, and Harvey Bradley, CFA are the fund's primary portfolio managers, positions they have held since the fund's inception in June 2026. Mr. Murphy is Head of Fixed Income, North America, at INA. Mr. Hyde is a senior portfolio manager at INA. Mr. Whiteley is Head of Global Credit at Insight Investment Management (Global) Limited (Insight UK), an affiliate of INA. Mr. Bradley is Co-Head of Global Rates investment at Insight UK. Messrs. Whiteley and Bradley are treated as "associated persons" of INA under the Investment Advisers Act of 1940, as amended (1940 Act), for purposes of providing investment advice with

respect to the fund pursuant to a participating affiliate agreement between INA and Insight UK. Each portfolio manager is jointly and primarily responsible for the day-to-day management of the fund's portfolio.

Purchase and Sale of Fund Shares

The fund will issue (or redeem) fund shares to certain institutional investors known as "Authorized Participants" (typically market makers or other broker-dealers) only in large blocks of fund shares known as "Creation Units," principally in exchange for cash. However, the fund also reserves the right to permit or require Creation Units to be issued in exchange for the deposit or delivery of a portfolio of in-kind securities designated by the fund.

Individual fund shares may only be purchased and sold on the Cboe BZX Exchange, Inc., other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. Because fund shares trade at market prices rather than at net asset value, fund shares may trade at a price greater than net asset value (premium) or less than net asset value (discount). When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) (the "bid-ask spread"). When available, recent information regarding the fund's net asset value, market price, premiums and discounts, and bid-ask spreads will be available at www.bny.com/investments.

Tax Information

The fund's distributions are taxable as ordinary income or capital gains, except when your investment is through an individual retirement account (IRA), retirement plan or other U.S. tax-advantaged investment plan (in which case you may be taxed upon withdrawal of your investment from such account).

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase fund shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser or its affiliates may pay the financial intermediary for certain activities related to the fund, including educational training programs, conferences, the development of technology platforms and reporting systems, or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Fund Details

Goal and Approach

The fund seeks high total return (consisting of income and capital appreciation) consistent with the preservation of capital. The fund's investment objective may be changed by the fund's board without shareholder approval. To pursue its goal, the fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in fixed income securities, as well as synthetic instruments, such as derivatives, that have economic characteristics similar to fixed-income securities. The fund's investment policy with respect to the investment of at least 80% of its net assets may be changed by the fund's board upon 60 days' prior notice to shareholders.

In constructing the fund's portfolio, the fund's sub-adviser, Insight North America LLC (sub-adviser), focuses on identifying undervalued fixed-income markets, currencies, sectors and securities. The sub-adviser looks for fixed-income securities with the most potential for added value, such as those with the potential for credit upgrades, unique structural characteristics, or innovative features. The sub-adviser selects securities for the fund's portfolio by:

- Using fundamental economic research and quantitative analysis to allocate assets among countries and currencies based on a comparative evaluation of interest and inflation rate trends, government fiscal and monetary policies, and the credit quality of government debt; and
- Actively trading among sectors and securities, focusing on sectors and individual securities that the sub-adviser considers to be relatively undervalued.

The fixed-income securities in which the fund invests principally include bonds, notes (including structured notes), mortgage-related securities, asset-backed securities, floating rate loans (limited to 20% of the fund's net assets) and other floating rate securities, and Eurodollar and Yankee dollar instruments. Fixed-income securities may be issued by U.S. and foreign corporations or entities; U.S. and foreign banks; the U.S. government (including indexed-inflation securities issued by the U.S. Treasury (TIPS)), its agencies, authorities, instrumentalities or sponsored enterprises; state and municipal governments; and foreign governments and their political subdivisions. Further, fixed-income securities may be U.S. dollar or non-U.S. dollar-denominated. The fixed-income securities in which the fund invests may have all types of interest rate payment and reset terms, including fixed rate, adjustable rate, floating rate, zero coupon, contingent, deferred, payment in kind, and auction rate features. The fund may invest in both new and existing fixed-income issuances.

The fund generally invests in eight or more countries, but always invests in at least three countries, one of which may be the United States. At times, the fund may invest a substantial part of its assets in any one country, including the United States; however, the fund will not invest more than 70% of its assets, at the time of purchase, in the United States. The fund may invest up to 40% of its assets in emerging markets. The fund considers an emerging market country to be a country that, at the time of purchase, is (i) classified as an emerging, frontier or developing economy by any supranational organization (such as the World Bank, International Monetary Fund, United Nations, or related entities), or (ii) considered an emerging market country for purposes of constructing a major emerging or frontier market securities index (such as J.P. Morgan, Bloomberg, or ICE emerging market indices). Emerging market countries in which the fund may invest may have sovereign ratings that are below investment grade or may be unrated. The fund will hedge most, but not necessarily all, of its foreign currency exposure to protect the U.S. dollar value of the fund's assets, principally by using forward contracts, futures contracts and swap agreements.

The fund normally invests primarily in fixed-income securities rated investment grade (i.e., Baa3/BBB- or higher) at the time of purchase or, if unrated, determined to be of comparable quality by the fund's sub-adviser. The fund, however, may invest up to 25% of its assets in fixed-income securities rated, at the time of purchase, below investment grade ("high yield" or "junk" bonds), but not rated lower than B, or the unrated equivalent as determined by the fund's sub-adviser. Under normal market conditions, the average credit quality of the fund's portfolio will be A3/A- or higher.

There are no restrictions on the dollar-weighted average maturity or average effective duration of the fund's portfolio or on the maturities or durations of the individual fixed-income securities the fund may purchase. A bond's maturity is the length of time until the principal must be fully repaid with interest. Dollar-weighted average maturity is an average of the stated maturities of the securities held by the fund, based on their dollar-weighted proportions in the fund. Duration is an indication of an investment's "interest rate risk," or how sensitive a bond or the fund's portfolio may be to changes

in interest rates. Generally, the longer a bond's duration, the more likely it is to react to interest rate fluctuations and the greater its long-term risk/return potential. The change in the value of a fixed-income security or portfolio can be approximated by multiplying its duration by a change in interest rates. For example, the market price of a fixed-income security with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same security would be expected to increase 3% if interest rates fell 1%.

Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. The fund may invest in agency or non-agency mortgage-backed securities, including privately-issued mortgage pass-through securities, which generally offer a higher yield than similar securities issued by a government entity because of the absence of any direct or indirect government or agency payment guarantees.

The fund may invest in asset-backed securities, which are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property, as well as home equity line of credit loans and other second-lien mortgages.

The fund's investments in floating rate loans are generally focused on senior secured loans but also may include second lien loans, senior unsecured loans, subordinated loans, and fixed rate loans with respect to which the fund has entered into derivative instruments (principally swap agreements and options on swap agreements) to effectively convert the fixed rate interest payments into floating rate interest payments. The fund also may purchase participations and assignments in, and commitments to purchase, floating rate loans.

The fund typically will sell a security if the fund's sub-adviser believes the security is overvalued from a valuation standpoint, another sector becomes relatively more attractive, and/or the sub-adviser expects the issuer's fundamentals to deteriorate. The fund does not have any limitations regarding portfolio turnover. The fund may engage in short-term trading in seeking to achieve its investment objective and may have portfolio turnover rates in excess of 100%. A portfolio turnover of 100% is equivalent to the fund buying and selling all of the securities in its portfolio once during the course of a year.

As noted above, the fund will use derivatives to hedge most, but not necessarily all, of its foreign currency exposure. The fund may also, but is not required to, use derivative instruments as a substitute for investing directly in an underlying asset, to increase returns, to manage market, foreign currency, duration, credit or interest rate risks, as part of a hedging strategy, or for other purposes related to the management of the fund. The derivative instruments in which the fund may invest typically include options, futures, options on futures (including those relating to securities, foreign currencies, indices and interest rates), forward contracts, and swap agreements (including total return, interest rate, inflation swaps, and credit default swaps). To the extent the fund invests in derivative instruments have economic characteristics similar to fixed-income securities as described in the fund's policy with respect to the investment of at least 80% of its net assets, the notional value of such instruments will be included in the 80% calculation. Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. A derivatives contract will obligate or entitle the fund to deliver or receive an asset or cash payment based on the change in value of the underlying asset.

The fund may purchase put and call options. A put option gives the purchaser of the option the right to sell the underlying asset during the option period at a specified price. A call option gives the purchaser of the option the right to buy the underlying asset during the option period at a specified price. Options purchased by the fund may be traded on either U.S. or foreign exchanges or over-the-counter. Futures contracts generally are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or index at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. The fund may engage in futures transactions on both U.S. and foreign exchanges. A swap is a contract that generally obligates the parties to exchange payments based on a specified security, basket of securities, or securities indices during a specified period. A forward currency contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract.

Although not principal investment strategies, the fund may invest in participations and assignments, collateralized debt obligations (CDOs) (which are a type of asset-backed security and include collateralized bond obligations (CBOs), collateralized loan obligations (CLOs) and other similarly structured securities, inflation-indexed securities issued by corporations, convertible securities (including contingent convertible capital securities (CoCos)), preferred stock, and shares of other ETFs. In addition, although not a principal investment strategy, the fund also may purchase or sell securities on a forward commitment, including on a "TBA" (to be announced) basis. These transactions involve a commitment by the fund to purchase or sell particular securities, such as mortgage-related securities, with payment and delivery taking place at a future date, and permit the fund to lock in a price or yield on a security it owns or intends to purchase, regardless of future changes in interest rates or market conditions.

Although not a principal investment strategy, the fund may lend its portfolio securities to brokers, dealers and other financial institutions. Loans of portfolio securities may not exceed 33-1/3% of the value of the fund's total assets.

Under adverse market conditions, the fund may take temporary defensive positions that are inconsistent with its principal investment strategies by holding cash or investing, without limit, in U.S. Treasury securities or money market instruments. When this allocation happens, the fund may not achieve its investment objective.

More information about the fund's portfolio securities and investment techniques, and associated risks, is provided in the fund's Statement of Additional Information.

Investment Risks

An investment in the fund is not a bank deposit. It is not insured or guaranteed by the FDIC or any other government agency. It is not a complete investment program. The value of your investment in the fund will fluctuate, sometimes dramatically, which means you could lose money.

The fund is subject to the following principal risks:

- *Fixed-income market risk:* The market value of a fixed-income security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). During periods of reduced market liquidity, the fund may not be able to readily sell fixed-income securities at prices at or near their perceived value. If the fund needed to sell large blocks of fixed-income securities to meet shareholder redemption requests or to raise cash, those sales could further reduce the prices of such securities. Redemption requests from Authorized Participants, which may be triggered by market turmoil or an increase in interest rates, could cause the fund to sell certain of its holdings at a loss or at undesirable prices and adversely affect the fund's share price and increase the fund's liquidity risk, fund expenses and/or taxable distributions. Economic and other market developments can adversely affect fixed-income securities markets. Regulations and business practices, for example, have led some financial intermediaries to curtail their capacity to engage in trading (i.e., "market making") activities for certain fixed-income securities, which could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets. Federal Reserve policy in response to market conditions, including with respect to interest rates, may adversely affect the value, volatility and liquidity of dividend and interest paying securities. Policy and legislative changes worldwide are affecting many aspects of financial regulation. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time. Further, some securities give the issuer the option to prepay or call the securities before their maturity date, which may reduce the market value of the security and the anticipated yield-to-maturity.
- *Interest rate risk:* Prices of bonds and other fixed rate fixed-income securities tend to move inversely with changes in interest rates. Typically, a rise in rates will adversely affect fixed-income securities and, accordingly, will cause the value of the fund's investments in these securities to decline. A wide variety of market factors can cause interest rates to rise, including central bank monetary policy, rising inflation and changes in general economic conditions. It is difficult to predict the pace at which central banks or monetary authorities may increase (or decrease) interest rates or the timing, frequency, or magnitude of such changes. During periods of very low interest rates, which occur from time to time due to market forces or actions of governments and/or their central banks, including the Board of Governors of the Federal Reserve System in the U.S., the fund may be subject to a greater risk of principal decline from rising interest rates. When interest rates fall, the values of already-issued fixed rate fixed-income securities generally rise. However, when interest rates fall, the fund's investments in new securities may be at lower yields and may reduce the fund's income. Changing interest rates may have unpredictable effects on markets, may result in heightened market volatility and may detract from fund performance. The magnitude of these fluctuations in the market price of fixed-income securities is generally greater for securities with longer effective maturities and durations because such instruments do not mature, reset interest rates or become callable for longer periods of time. Interest rate changes may have different effects on the values of mortgage-backed securities because of prepayment and extension risks. Unlike investment grade bonds, however, the prices of high yield ("junk") bonds may fluctuate unpredictably and not necessarily inversely with changes in interest rates. In addition, the rates on floating rate instruments adjust periodically with changes in market interest rates. Although these instruments are generally less sensitive to interest rate changes than fixed-rate instruments, the value of floating rate loans and other floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates.
- *Credit risk:* Failure of an issuer of a security to make timely interest or principal payments when due, or a decline or perception of a decline in the credit quality of the security, can cause the security's price to fall, lowering the value of the fund's investment in such security. The lower a security's credit rating, the greater the chance that the issuer of the security will default or fail to meet its payment obligations.
- *High yield securities risk:* High yield ("junk") securities involve greater credit risk, including the risk of default, than investment grade securities, and are considered predominantly speculative with respect to the issuer's ability to make principal and interest payments. The prices of high yield securities can fall in response to adverse changes in general economic conditions, to changes in the financial condition of the securities' issuers, and to changes in interest rates to a greater extent than those of higher rated securities. During periods of economic downturn or rising interest rates, issuers of below investment grade securities may experience financial stress that could adversely affect their ability to

make payments of principal and interest and increase the possibility of default. Securities rated investment grade when purchased by the fund may subsequently be downgraded.

- *Government securities risk:* Not all obligations of the U.S. government, its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Some obligations are backed only by the credit of the issuing agency or instrumentality, and in some cases there may be some risk of default by the issuer. Any guarantee by the U.S. government or its agencies or instrumentalities of a security held by the fund does not apply to the market value of such security or to shares of the fund itself. A security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed only as to the timely payment of interest and principal when held to maturity. In addition, because many types of U.S. government securities trade actively outside the United States, their prices may rise and fall as changes in global economic conditions affect the demand for these securities. A downgrade of the ratings of U.S. government securities, such as securities backed by the U.S. Treasury, which are often used as a benchmark for other borrowing arrangements, could result in higher interest rates for individual and corporate borrowers, cause disruptions in the international bond markets, have a substantial negative effect on the U.S. economy, and/or cause the value of the fund's holdings in U.S. government securities to decline.
- *Mortgage-backed securities risk:* Mortgage-backed securities represent a participation in, or are secured by, mortgage loans. Certain of the mortgage-backed securities in which the fund may invest are not backed by the full faith and credit of the U.S. government and there can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities where it is not obligated to do so. The fund may also invest in non-agency mortgage-backed securities, including privately-issued mortgage pass-through securities, which generally offer a higher yield than similar securities issued by a government entity because of the absence of any direct or indirect government or agency payment guarantees. These mortgage-related securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities. In addition, some mortgage-related securities issued by private organizations may not be readily marketable, may be more difficult to value accurately and may be more volatile than similar securities issued by a government entity. Mortgage-backed securities tend to increase in value less than other debt securities when interest rates decline, but are subject to similar or greater risk of decline in market value during periods of rising interest rates. Because of prepayment and extension risk, mortgage-backed securities react differently to changes in interest rates than other bonds. Small movements in interest rates may quickly and significantly affect the value of certain mortgage-backed securities. Transactions in mortgage-backed pass-through securities often occur through TBA transactions. Default by or bankruptcy of a counterparty to a TBA transaction could expose the fund to possible losses because of an adverse market action, expenses, or delays in connection with the purchase or sale of the pools of mortgage-backed pass-through securities specified in the TBA transaction.
- *Asset-backed securities risk:* Asset-backed securities are typically structured like mortgage-backed securities, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include, for example, items such as motor vehicle installment sales or installment loan contracts, leases on various types of real and personal property, and receivables from credit card agreements. General downturns in the economy could cause the value of asset-backed securities to fall. In addition, asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may provide the fund with a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities. Asset-backed securities may also be subject to increased volatility and may become illiquid and more difficult to value.
- *Eurodollar and Yankee Dollar investments risk:* Eurodollar investments are U.S. dollar-denominated instruments issued by foreign corporate and government issuers and are generally held in banks outside the United States, primarily in Europe. Yankee Dollar investments are U.S. dollar-denominated instruments typically issued in the United States by foreign governments and their agencies and foreign banks and corporations. These investments involve risks similar to the risks of investing in foreign securities, including potential unfavorable political and economic developments, foreign withholding or other taxes, seizure of foreign deposits, currency controls, interest limitations or other governmental restrictions which might affect payment of principal or interest.
- *Prepayment and extension risk:* When interest rates fall, the principal on mortgage-backed and certain asset-backed securities may be prepaid. The loss of higher yielding underlying mortgages and the reinvestment of proceeds at lower interest rates can reduce the fund's potential price gain in response to falling interest rates, reduce the fund's yield, or cause the fund's share price to fall. When interest rates rise, the effective duration of the fund's mortgage-backed and other asset-backed securities may lengthen due to a drop in prepayments of the underlying mortgages or other assets. This is known as extension risk and would increase the fund's sensitivity to rising interest rates and its potential for price declines.
- *Call risk:* Some securities give the issuer the option to prepay or call the securities before their maturity date, which may reduce the market value of the security and the anticipated yield-to-maturity. Issuers often exercise this right when interest rates fall. If an issuer "calls" its securities during a time of declining interest rates, the fund might have to reinvest the proceeds in an investment offering a lower yield, and therefore might not benefit from any increase in

value as a result of declining interest rates. During periods of market illiquidity or rising interest rates, prices of "callable" issues are subject to increased price fluctuation.

- *Foreign investment risk:* To the extent the fund invests in foreign securities, the fund's performance will be influenced by political, social and economic factors affecting investments in foreign issuers. Special risks associated with investments in foreign issuers include exposure to currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political and economic instability and differing auditing and legal standards. The imposition of sanctions, confiscations, trade restrictions (including tariffs) and other government restrictions by the United States and other governments, or problems related to share registration, trade settlement, or asset custody, may result in losses for the fund. Investments denominated in foreign currencies are subject to the risk that such currencies will decline in value relative to the U.S. dollar and affect the value of these investments held by the fund. To the extent securities held by the fund trade in a market that is closed when the exchange on which the fund's shares trade is open, there may be deviations between the current price of a security and the last quoted price for the security in the closed foreign market. These deviations could result in the fund experiencing premiums or discounts greater than those of ETFs that invest in domestic securities.
- *Foreign government obligations, debt obligations of supranational entities and sovereign debt obligations risk:* Investing in foreign government obligations, debt obligations of supranational entities and the sovereign debt of foreign countries, including emerging market countries, creates exposure to the direct or indirect consequences of political, social or economic changes in the countries that issue the securities or in which the issuers are located. The ability and willingness of sovereign obligors or the governmental authorities that control repayment of their external debt to pay principal and interest on such debt when due may depend on general economic and political conditions within the relevant country. Certain countries in which the fund may invest have historically experienced, and may continue to experience, high rates of inflation, high interest rates, exchange rate trade difficulties and extreme poverty and unemployment. Many of these countries also are characterized by political uncertainty or instability. Additional factors which may influence the ability or willingness of a foreign government or country to service debt include a country's cash flow situation, the availability of sufficient foreign exchange on the date a payment is due, the relative size of its debt service burden to the economy as a whole and its government's policy towards the International Monetary Fund, the International Bank for Reconstruction and Development, the World Bank and other international agencies. The ability of a foreign sovereign obligor to make timely payments on its external debt obligations also will be strongly influenced by the obligor's balance of payments, including export performance, its access to international credit and investments, fluctuations in interest rates and the extent of its foreign reserves. A governmental obligor may default on its obligations. If such an event occurs, the fund may have limited legal recourse against the issuer and/or guarantor. In some cases, remedies must be pursued in the courts of the defaulting party itself, and the ability of the holder of foreign sovereign debt securities to obtain recourse may be subject to the political climate in the relevant country. In addition, no assurance can be given that the holders of commercial bank debt will not contest payments to the holders of other foreign sovereign debt obligations in the event of default under their commercial bank loan agreements. Sovereign obligors are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. Certain of these obligors, in the past, have experienced substantial difficulties in servicing their external debt obligations, which led to defaults on certain obligations and the restructuring of certain indebtedness. Moreover, no established secondary markets may exist for many of the sovereign debt obligations in which the fund may invest. Reduced secondary market liquidity may have an adverse effect on the market price and the fund's ability to dispose of particular instruments when necessary to meet its liquidity requirements or in response to specific economic events such as a deterioration in the creditworthiness of the issuer. Reduced secondary market liquidity for certain sovereign debt obligations also may make it more difficult for the fund to obtain accurate market quotations for purposes of valuing its portfolio.
- *Foreign currency risk:* Investments in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Currency exchange rates may fluctuate significantly over short periods of time. Foreign currencies are also subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government intervention and controls.
- *Emerging market risk:* The securities of issuers located or doing substantial business in emerging market countries tend to be more volatile and less liquid than the securities of issuers located in countries with more mature economies, potentially making prompt liquidation at an attractive price difficult. The economies of countries with emerging markets may be based predominantly on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme debt burdens or volatile inflation rates. There may be less information publicly available about an emerging market issuer than about a developed market issuer and/or the available information may be outdated or unreliable. In addition, emerging market issuers may not be subject to accounting, auditing, legal and financial reporting standards comparable to those in developed markets, potentially making it difficult to evaluate such issuers. Transaction settlement and dividend collection procedures also may be less reliable

in emerging markets than in developed markets. Emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Additionally, investments in these countries may have restrictions that make it difficult or impossible for the fund to exercise shareholder rights, pursue legal remedies, and obtain judgements in foreign courts. Investments in these countries may be subject to political, economic, legal, market and currency risks. The risks may include less protection of property rights and uncertain political and economic policies, greater vulnerability to market manipulation, the imposition of capital controls and/or foreign investment limitations by a country, nationalization of businesses and the imposition of sanctions by other countries, such as the United States.

- *Liquidity risk:* When there is little or no active trading market for specific securities, it can become more difficult to sell the securities in a timely manner at or near their perceived value. In such a market, the value of such securities and the fund's share price may fall dramatically. Investments that are illiquid or that trade in lower volumes may be more difficult to value. The market for below investment grade securities may be less liquid and therefore these securities may be harder to value or sell at an acceptable price, especially during times of market volatility or decline. Investments in foreign securities, particularly those of issuers located in emerging markets, tend to have greater exposure to liquidity risk than domestic securities. In addition, in stressed market conditions the market for the fund's shares may become less liquid in response to deteriorating liquidity with respect to the fund's portfolio securities, which could lead to differences between the market price of the fund's shares and the net asset value of the fund's shares. Additionally, other market developments can adversely affect fixed-income securities markets. Regulations and business practices, for example, have led some financial intermediaries to curtail their capacity to engage in trading (*i.e.*, "market making") activities for certain fixed-income securities, which could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). Liquidity can also decline unpredictably in response to overall economic conditions or credit tightening.
- *Issuer risk:* A security's market value may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's products or services, or factors that affect the issuer's industry, such as labor shortages or increased production costs and competitive conditions within an industry.
- *Market risk:* The value of the securities in which the fund invests may be affected by political, regulatory, economic and social developments, and developments that impact specific economic sectors, industries or segments of the market. In addition, turbulence in financial markets and reduced liquidity in equity, credit and/or fixed-income markets may negatively affect many issuers, which could adversely affect the fund. Global economies and financial markets are becoming increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. These risks may be magnified if certain events or developments adversely interrupt the global supply chain; in these and other circumstances, such risks might affect companies world-wide. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the fund and its investments. To the extent the fund may overweight its investments in certain countries, companies, industries or sectors, such positions will increase the fund's exposure to risk of loss from adverse developments affecting those countries, companies, industries or sectors.
- *Structured notes risk:* Structured notes, a type of derivative instrument, can be volatile, and the possibility of default by the financial institution or counterparty may be greater for these instruments than for other types of derivative instruments. Structured notes typically are purchased in privately negotiated transactions from financial institutions and, thus, an active trading market for such instruments may not exist.
- *Derivatives risk:* A small investment in derivatives could have a potentially large impact on the fund's performance. The use of derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in the underlying assets, and the fund's use of derivatives may result in losses to the fund and increased portfolio volatility. Derivatives in which the fund may invest can be highly volatile, illiquid and difficult to value, and there is the risk that changes in the value of a derivative held by the fund will not correlate with the underlying assets or the fund's other investments in the manner intended. Derivative instruments, such as over-the-counter swap agreements, forward contracts and other over-the-counter transactions, also involve the risk that a loss may be sustained as a result of the failure of the counterparty to the derivative instruments to make required payments or otherwise comply with the derivative instruments' terms. Many of the regulatory protections afforded participants on organized exchanges for futures contracts and exchange-traded options, such as the performance guarantee of an exchange clearing house, are not available in connection with over-the-counter derivative transactions. Certain derivatives, such as written call options, have the potential for unlimited loss, regardless of the size of the initial investment, and involve greater risks than the underlying assets because, in addition to general market risks, they are subject to liquidity risk (lack of a liquid secondary market), credit and counterparty risk (failure of the counterparty to the derivatives transaction to honor its

obligation) and pricing risk (risk that the derivative cannot or will not be accurately valued). If a derivative transaction is particularly large or if the relevant market is illiquid (as is the case with many privately-negotiated derivatives, including swap agreements), it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

- *Futures risk:* The value of a futures contract tends to increase and decrease in correlation with the value of the underlying instrument. Risks of futures contracts may arise from an imperfect correlation between movements in the price of the futures and the price of the underlying instrument. The fund's use of futures contracts exposes the fund to leverage risk because of the small margin requirements relative to the value of the futures contract. A relatively small market movement will have a proportionately larger impact on the funds that the fund has deposited or will have to deposit with a broker to maintain its futures position. While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. Futures exchanges may impose daily or intraday price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, the fund may be unable to close out its futures contracts at a time that is advantageous. The price of futures can be highly volatile; using them could lower total return, and the potential loss from futures could exceed the fund's initial investment in such contracts.
- *Options risk:* The fund's successful use of options depends on the ability of the sub-adviser to forecast market movements correctly. When the fund purchases an option, it runs the risk that it will lose its entire investment in the option in a relatively short period of time, unless the fund exercises the option or enters into a closing sale transaction before the option's expiration. If the price of the underlying security does not rise (in the case of a call) or fall (in the case of a put) to an extent sufficient to cover the option premium and transaction costs, the fund will lose part or all of its investment in the option. The effective use of options also depends on the fund's ability to terminate option positions at times when the sub-adviser deems it desirable to do so. There is no assurance that the fund will be able to effect closing transactions at any particular time or at an acceptable price. The sale of options by the fund may create investment leverage.
- *Swap risk:* A swap is a contract that generally obligates the parties to exchange payments based on a specified security, basket of securities, or securities indices during a specified period. Swaps can involve greater risks than direct investment in securities because swaps may be leveraged and are subject to counterparty risk (e.g., the risk of a counterparty's defaulting on the obligation or bankruptcy), credit risk and pricing risk (i.e., swaps may be difficult to value). It may not be possible for the fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.
- *Currency forward risk:* Currency forward contracts are derivative instruments pursuant to a contract with a counterparty to buy or sell a specific currency at a future date at a price set at the time of the contract. Not all forward contracts require a counterparty to post collateral, which may expose the fund to greater losses in the event of a default by a counterparty. Foreign currency forward transactions include risks associated with fluctuations in foreign currency.
- *Floating rate loan risk:* Unlike publicly traded common stocks which trade on national exchanges, there is no central market or exchange for loans to trade. Loans trade in an over-the-counter market, and confirmation and settlement, which are effected through standardized procedures and documentation, may take significantly longer than seven days to complete. The secondary market for floating rate loans also may be subject to irregular trading activity and wide bid/ask spreads. The lack of an active trading market for certain floating rate loans may impair the ability of the fund to realize full value in the event of the need to sell a floating rate loan and may make it difficult to value such loans. In addition, floating rate loans may not have call protection and may be prepaid partially or in full at any time without penalty. There may be less readily available, reliable information about certain floating rate loans than is the case for many other types of securities, and the fund's portfolio managers may be required to rely primarily on their own evaluation of a borrower's credit quality rather than on any available independent sources. The value of collateral, if any, securing a floating rate loan can decline, and may be insufficient to meet the issuer's obligations in the event of non-payment of scheduled interest or principal or may be difficult to readily liquidate. In the event of the bankruptcy of a borrower, the fund could experience delays or limitations imposed by bankruptcy or other insolvency laws with respect to its ability to realize the benefits of the collateral securing a loan. These laws may be less developed and more cumbersome with respect to the fund's non-U.S. investments. Uncollateralized senior loans involve a greater risk of loss. Some floating rate loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the loans to presently existing or future indebtedness of the borrower or take other action detrimental to lenders, including the fund, such as invalidation of loans. The floating rate loans in which the fund invests typically will be below investment grade quality and, like other below investment grade securities, are inherently speculative. As a result, the risks associated with such floating rate loans are similar to the risks of below investment grade securities, although senior loans are typically senior and secured in contrast to other below investment grade securities, which are often subordinated and unsecured. Floating rate loans may not be considered to be "securities" for purposes of the anti-fraud protections of the federal securities laws, including those with respect

to the use of material non-public information, so that purchasers, such as the fund, may not have the benefit of these protections.

- *Cash transaction risk:* Most ETFs generally make in-kind redemptions to avoid being taxed at the fund level on gains on the distributed portfolio securities. However, unlike most ETFs, the fund currently intends to effect redemptions for cash, rather than in-kind, because of the nature of the fund's investments. As such, the fund may be required to sell portfolio securities to obtain the cash needed to distribute redemption proceeds, which includes cash transaction costs. Therefore, the fund may recognize a capital gain on these sales that might not have been incurred if the fund had made a redemption in-kind. This may decrease the tax efficiency of the fund compared to ETFs that utilize an in-kind redemption process, and there may be a substantial difference in the after-tax rate of return between the fund and conventional ETFs.
- *Management risk:* The investment process and techniques used by the fund's sub-adviser could fail to achieve the fund's investment goal, may cause your fund investment to lose value or may cause the fund to underperform other funds with similar investment goals.
- *Authorized participants, market makers and liquidity providers risk:* The fund has a limited number of financial institutions that may act as Authorized Participants, which are responsible for the creation and redemption activity for the fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, fund shares may trade at a material discount to net asset value and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable or unwilling to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Fluctuation of net asset value, share premiums and discounts risk:* The net asset value of fund shares will generally fluctuate with changes in the market value of the fund's securities holdings. The market prices of fund shares will generally fluctuate in accordance with changes in the fund's net asset value and supply and demand of fund shares on the exchange. It cannot be predicted whether fund shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for fund shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of the underlying portfolio trading individually or in the aggregate at any point in time. The market prices of fund shares may deviate significantly from the net asset value of fund shares during periods of market volatility. However, given that fund shares can be created and redeemed in Creation Units, the Adviser believes that large discounts or premiums to the net asset value of fund shares should not be sustained over long periods. While the creation/redemption feature is designed to make it likely that fund shares normally will trade close to the fund's net asset value, disruptions to creations and redemptions or market volatility may result in trading prices that differ significantly from the fund's net asset value. If an investor purchases fund shares at a time when the market price is at a premium to the net asset value of fund shares or sells at a time when the market price is at a discount to the net asset value of fund shares, then the investor may sustain losses.
- *Trading issues risk:* Although fund shares are listed for trading on an exchange and may be listed or traded on other U.S. and non-U.S. stock exchanges as well, there can be no assurance that an active trading market for such fund shares will develop or be maintained. Trading in fund shares may be halted due to market conditions or for reasons that, in the view of the listing exchange, make trading in fund shares inadvisable. In addition, trading in fund shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange "circuit breaker" rules. Similar to the shares of operating companies listed on a stock exchange, fund shares may be sold short and are therefore subject to the risk of increased volatility in the trading price of the fund's shares. While the fund expects that the ability of Authorized Participants to create and redeem fund shares at net asset value should be effective in reducing any such volatility, there is no guarantee that it will eliminate the volatility associated with such short sales. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the fund will continue to be met or will remain unchanged or that fund shares will trade with any volume, or at all, on any stock exchange.
- *Portfolio turnover risk:* The fund may engage in short-term trading, which could produce higher transaction costs and taxable distributions, and lower the fund's after-tax performance.
- *New fund risk:* The fund is newly organized with limited operating history. The fund has limited performance history for investors to evaluate and may not attract sufficient assets to achieve investment and trading efficiencies. There can be no assurance that the fund will grow to or maintain an economically viable size, in which case the board of trustees may determine to liquidate the fund, which can be initiated without shareholder approval if the board determines it is in the best interest of shareholders. As a result, the timing of the fund's liquidation may not be favorable to certain individual shareholders.

Non-Principal Investment Risks. In addition to the principal risks described above, the fund is subject to the following additional risks that are not anticipated to be principal risks of investing in the fund:

- *Inflation-indexed security risk:* Interest payments on inflation-indexed securities can be unpredictable and will vary as the principal and/or interest is periodically adjusted based on the rate of inflation. If the index measuring inflation falls, the interest payable on these securities will be reduced. With respect to TIPS, the U.S. Treasury has guaranteed that in the event of a drop in prices, it would repay the par amount of its inflation-indexed securities. Inflation-indexed securities issued by corporations generally do not guarantee repayment of principal. Any increase in the principal amount of an inflation-indexed security will be considered taxable ordinary income, even though investors do not receive their principal until maturity. As a result, the fund may be required to make annual distributions to shareholders that exceed the cash the fund received, which may cause the fund to liquidate certain investments when it is not advantageous to do so. Also, if the principal value of an inflation-indexed security is adjusted downward due to deflation, amounts previously distributed may be characterized in some circumstances as a return of capital.
- *Convertible securities risk:* Convertible securities may be converted at either a stated price or stated rate into underlying shares of common stock. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer. Although to a lesser extent than with fixed-income securities, the market value of convertible securities tends to decline as interest rates increase. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. Although convertible securities provide for a stable stream of income, they are subject to the risk that their issuers may default on their obligations. Convertible securities also offer the potential for capital appreciation through the conversion feature, although there can be no assurance of capital appreciation because securities prices fluctuate. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation. Synthetic convertible securities are subject to additional risks, including risks associated with derivatives. An investment in CoCos may subject the fund to the risk of the occurrence of a triggering event which, depending on the underlying circumstances, may result in the issuer converting the security to an equity interest or writing down the principal value of such securities (either partially or in full). Coupons associated with CoCos are generally fully discretionary, and coupon payments may be deferred or cancelled by the issuer without causing an event of default.
- *Preferred stock risk:* Preferred stock is a class of a capital stock that typically pays dividends at a specified rate. Preferred stock is generally senior to common stock, but subordinate to debt securities, with respect to the payment of dividends and on liquidation of the issuer. The market value of preferred stock generally decreases when interest rates rise and is also affected by the issuer's ability to make payments on the preferred stock.
- *Participation interests and assignments risk:* A participation interest gives the fund an undivided interest in a loan in the proportion that the fund's participation interest bears to the total principal amount of the loan, but does not establish any direct relationship between the fund and the borrower. If a floating rate loan is acquired through a participation, the fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement against the borrower, and the fund may not directly benefit from the collateral supporting the debt obligation in which it has purchased the participation. As a result, the fund will be exposed to the credit risk of both the borrower and the institution selling the participation. The fund also may invest in a loan through an assignment of all or a portion of such loan from a third party. If a floating rate loan is acquired through an assignment, the fund may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral.
- *Subordinated securities risk:* Holders of securities that are subordinated or "junior" to more senior securities of an issuer are entitled to payment after holders of more senior securities of the issuer. Subordinated securities are more likely to suffer a credit loss than non-subordinated securities of the same issuer, any loss incurred by the subordinated securities is likely to be proportionately greater, and any recovery of interest or principal may take more time. As a result, even a perceived decline in creditworthiness of the issuer is likely to have a greater impact on the market value of these securities. Subordinated loans generally are subject to similar risks as those associated with investments in senior loans, except that such loans are subordinated in payment and/or lower in lien priority to first lien holders. Consequently, subordinated loans generally have greater price volatility than senior loans and may be less liquid. The risks associated with subordinated unsecured loans, which are not backed by a security interest in any specific collateral, are higher than those for comparable loans that are secured by specific collateral.
- *Loan valuation risk:* Because there may be a lack of centralized information and trading for certain loans in which the fund may invest, reliable market value quotations may not be readily available for such loans and their valuation may require more research than for securities with a more developed secondary market. Moreover, the valuation of such loans may be affected by uncertainties in the conditions of the financial market, unreliable reference data, lack of transparency and inconsistency of valuation models and processes.

- *CDOs risk:* The risks of an investment in a CDO, including a CBO or CLO, depend largely on the type of the collateral and the tranche of the CDO in which the fund invests. CDO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default, market anticipation of defaults, as well as aversion to CDO securities as an asset class. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus, are not registered under the securities laws and may not have an active secondary trading market. As a result, investments in CDOs may be characterized by the fund as illiquid securities. In addition to the normal risks associated with credit-related securities discussed elsewhere in this prospectus (e.g., interest rate risk and default risk), investments in CDOs may be more volatile, less liquid and more difficult to price than other types of investments.
- *Municipal securities risk:* The amount of public information available about municipal securities is generally less than that for corporate equities or bonds. Special factors, such as legislative changes, and state and local economic and business developments, may adversely affect the yield and/or value of the fund's investments in municipal securities. Other factors include the general conditions of the municipal securities market, the size of the particular offering, the maturity of the obligation and the rating of the issue. The municipal securities market can be susceptible to increases in volatility and decreases in liquidity. The secondary market for certain municipal bonds (such as those issued by smaller municipalities) tends to be less well developed or liquid than many other securities markets, which may adversely affect the fund's ability to sell such municipal bonds at attractive prices. Liquidity can decline unpredictably in response to overall economic conditions or credit tightening. Increases in volatility and decreases in liquidity may be caused by a rise in interest rates (or the expectation of a rise in interest rates). An unexpected increase in fund redemption requests from Authorized Participants could cause the fund to sell certain of its holdings at a loss or at undesirable prices and adversely affect the fund's share price and increase the fund's liquidity risk and fund expenses. Changes in economic, business or political conditions relating to a particular municipal project, municipality, or state, territory or possession of the United States in which the fund invests may have an impact on the fund's share price. A credit rating downgrade relating to a default by, or insolvency or bankruptcy of, one or several municipal security issuers of a state, territory or possession of the United States in which the fund invests could affect the market values and marketability of many or all municipal securities of such state, territory or possession. Any such credit impairment could adversely impact the value of their bonds, which could negatively impact the performance of the fund.
- *ETF risk:* To the extent the fund invests in other ETFs, the fund will be affected by the investment policies, practices and performance of such entities in direct proportion to the amount of assets the fund has invested therein. The risks of investing in other ETFs typically reflect the risks associated with the types of instruments in which the ETFs invest. When the fund invests in an ETF, shareholders of the fund will bear indirectly their proportionate share of the expenses of the ETF (including management fees) in addition to the expenses of the fund. The fund will incur brokerage costs when purchasing and selling shares of ETFs.
- *Forward commitments risk:* The purchase or sale of securities on a forward commitment basis means delivery and payment take place at a future date at a predetermined price. When purchasing a security on a forward commitment basis, the fund would assume the risks of ownership of the security, including the risk of price fluctuations, and takes such fluctuations into account when determining its net asset value.
- *Costs of buying and selling shares risk:* Investors buying or selling fund shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of fund shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for fund shares (the "bid" price) and the price at which an investor is willing to sell fund shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for fund shares based on trading volume and market liquidity, and is generally lower if fund shares have more trading volume and market liquidity and higher if fund shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling fund shares, including bid/ask spreads, frequent trading of fund shares may significantly reduce investment results and an investment in fund shares may not be advisable for investors who anticipate regularly making small investments.
- *Securities lending risk:* The fund may lend its portfolio securities to brokers, dealers and other financial institutions. In connection with such loans, the fund will receive collateral from the borrower equal to at least 100% of the value of the loaned securities. If the borrower of the securities fails financially, there could be delays in recovering the loaned securities or exercising rights to the collateral.
- *Temporary investment risk:* Under adverse market conditions, the fund could invest some or all of its assets in U.S. Treasury securities and/or money market securities, or hold cash. Although the fund would do this for temporary defensive purposes, it could reduce the benefit from any upswing in the market. During such periods, the fund's investments may not be consistent with its principal investment strategy, and the fund may not achieve its investment objective.

Management

Investment Adviser

The investment adviser for the fund is BNY Mellon ETF Investment Adviser, LLC, located at 201 Washington Street, Boston, Massachusetts 02108. The Adviser serves as investment adviser to twenty-one funds, and as of March 31, 2026, oversees approximately \$15.83 billion in assets. The fund will pay the Adviser a management fee at an annual rate of 0.40% of the value of the fund's average daily net assets.

The fund's management agreement provides that the Adviser will pay substantially all expenses of the fund, except for the management fees, payments under the fund's 12b-1 plan (if any), interest expenses, taxes, acquired fund fees and expenses, brokerage commissions, costs of holding shareholder meetings, fees and expenses associated with any securities lending program to be adopted by the fund, and litigation and potential litigation and other extraordinary expenses not incurred in the ordinary course of the fund's business.

The Adviser may from time to time voluntarily waive and/or reimburse fees or expenses in order to limit total annual fund operating expenses. Any such voluntary waiver or reimbursement may be eliminated by the Adviser at any time.

The Adviser is an investment adviser registered with the Securities and Exchange Commission (SEC) as such pursuant to the Investment Advisers Act of 1940. The Adviser is the primary ETF business, and a wholly-owned subsidiary, of The Bank of New York Mellon Corporation (BNY), a global investments company dedicated to helping its clients manage and service their financial assets throughout the investment lifecycle. Whether providing financial services for institutions, corporations or individual investors, BNY delivers informed investment management and investment services in 35 countries. BNY is a leading investment management and investment services company, uniquely focused to help clients manage and move their financial assets in the rapidly changing global marketplace. As of March 31, 2026, BNY had \$59.4 trillion in assets under custody and administration and \$2.1 trillion in assets under management. BNY is the corporate brand of The Bank of New York Mellon Corporation and may be used to reference the corporation as a whole and/or its various subsidiaries. BNY Investments is one of the world's leading investment management organizations, and one of the top U.S. wealth managers, encompassing BNY's affiliated investment management firms, wealth management services and global distribution companies. Additional information is available at www.bny.com/investments.

The asset management philosophy of the Adviser is based on the belief that discipline and consistency are important to investment success. For each fund in the trust, the Adviser seeks to establish clear guidelines for portfolio management and to be systematic in making decisions. This approach is designed to provide each fund with a distinct, stable identity.

Sub-Adviser

The Adviser has engaged its affiliate, Insight North America LLC (INA), a wholly-owned subsidiary of BNY, to serve as the fund's sub-adviser. INA is part of a global group of affiliated investment managers providing investment advisory services under the corporate brand "Insight Investment" or "Insight". INA, located at 200 Park Avenue, New York, New York 10166, is registered with the SEC as an investment adviser. INA, subject to the Adviser's supervision and approval, provides day-to-day management of the fund's investments. As of March 31, 2026, INA managed approximately \$164.5 billion of assets.

A discussion regarding the basis for the board's approval of the fund's advisory agreement with the Adviser and the sub-investment advisory agreement between the Adviser and INA on behalf of the fund will be available in the fund's Form N-CSR for the period ending November 30, 2026.

The Adviser has obtained from the SEC an exemptive order, upon which the fund may rely, to use a manager of managers approach that permits the Adviser, subject to certain conditions and approval by the fund's board, to enter into and materially amend sub-investment advisory agreements with one or more sub-advisers who are either unaffiliated or affiliated with the Adviser without obtaining shareholder approval. The exemptive order also relieves the fund from disclosing the sub-investment advisory fee paid by the Adviser to a sub-adviser in documents filed with the SEC and provided to shareholders. The fund is required to disclose (as a dollar amount and a percentage of the fund's assets) (1) the aggregate fees paid to the Adviser and any wholly-owned sub-adviser and (2) the aggregate fees paid to affiliated (i.e., less than wholly-owned) and unaffiliated sub-advisers. The Adviser has ultimate responsibility (subject to oversight by the fund's board) to supervise any sub-adviser and recommend the hiring, termination, and replacement of any sub-adviser to the fund's board. The fund's board, including a majority of the "non-interested" board members, must approve each new sub-adviser. In addition, the fund is required to provide shareholders with information about each new sub-adviser within 90 days of the hiring of any new sub-adviser.

The Adviser or BNY Mellon Securities Corporation (BNYSC), the fund's distributor, may provide cash payments out of its own resources to financial intermediaries that sell shares of the fund or provide other services that facilitate

investment in the fund. Such payments are separate from any 12b-1 fees and/or other expenses that may be paid by the fund. Because those payments are not made by fund shareholders or the fund, the fund's total expense ratio will not be affected by any such payments. These payments may be made to financial intermediaries, including affiliates, that provide sub-administration and/or recordkeeping services, marketing support and/or access to sales meetings, sales representatives and management representatives of the financial intermediary. Cash compensation also may be paid from the Adviser's or BNYSC's own resources to financial intermediaries that make shares of the fund available to their clients, develop new products that feature the fund, create educational content about the fund, or otherwise promote the fund or include the fund on a sales list, including a preferred or select sales list or in other sales programs. These payments sometimes are referred to as "revenue sharing." From time to time, the Adviser or BNYSC also may provide cash or non-cash compensation to financial intermediaries or their representatives in the form of occasional gifts; occasional meals, tickets or other entertainment; support for due diligence trips; educational conference sponsorships; support for recognition programs; technology or infrastructure support; and other forms of cash or non-cash compensation permissible under broker-dealer regulations. In some cases, these payments or compensation may create an incentive for a financial intermediary or its employees to recommend or sell shares of the fund to you. This potential conflict of interest may be addressed by policies, procedures or practices that are adopted by the financial intermediary. As there may be many different policies, procedures or practices adopted by different intermediaries to address the manner in which compensation is earned through the sale of investments or the provision of related services, the compensation rates and other payment arrangements that may apply to a financial intermediary and its representatives may vary by intermediary. Please contact your financial representative for details about any payments they or their firm may receive in connection with the sale of fund shares or the provision of services to the fund.

Portfolio Managers

Brendan Murphy, CFA, Nathaniel Hyde, CFA, Adam Whiteley, CFA, and Harvey Bradley, CFA are the fund's primary portfolio managers, positions they have held since the fund's inception in June 2026. Mr. Murphy is Head of Fixed Income, North America, at INA. He has been employed by INA or a predecessor company of INA since 2005. Mr. Hyde is a senior portfolio manager at INA. He has been employed by INA or a predecessor company of INA since 2007. Mr. Whiteley is Head of Global Credit at Insight. He has been employed by Insight UK, an affiliate of INA, since 2007. Mr. Bradley is Co-Head of Global Rates investment at Insight UK. He has been employed by Insight UK since 2012. Messrs. Whiteley and Bradley are treated as "associated persons" of INA. Messrs. Murphy, Hyde, Whiteley and Bradley are jointly and primarily responsible for the day-to-day management of the fund's portfolio.

The fund's Statement of Additional Information (SAI) provides additional portfolio manager information, including compensation, other accounts managed and ownership of fund shares.

Code of Ethics

The fund, the Adviser, INA, and BNYSC have each adopted a code of ethics that permits its personnel, subject to such code, to invest in securities, including securities that may be purchased or held by the fund. Each code of ethics restricts the personal securities transactions of employees, and requires portfolio managers and other investment personnel to comply with the code's preclearance and disclosure procedures. The primary purpose of the respective codes is to ensure that personal trading by employees is done in a manner that does not disadvantage the fund or other client accounts.

Distributor and Distribution and Service Plan

BNYSC, a wholly-owned subsidiary of BNY, serves as the fund's distributor. BNYSC does not distribute fund shares in less than creation units, nor does it maintain a secondary market in fund shares. BNYSC may enter into selected agreements with other broker-dealers or other qualified financial institutions for the sale of creation units of fund shares. BNYSC also serves as distributor for other affiliated mutual funds.

The board of trustees of the trust has adopted a distribution and service plan (Plan) pursuant to Rule 12b-1, under the 1940 Act, for the fund.

Under the Plan, the fund is authorized to pay fees in connection with the sale and distribution of its shares in an amount up to 0.25% of the fund's average daily net assets each year. No payments pursuant to the Plan will be made through at least the first twelve (12) months of operation. Additionally, the implementation of any such payments would have to be approved by the board prior to implementation. Because these fees would be paid out of the fund's assets on an ongoing basis, if payments are made in the future, these fees will increase the cost of your investment and will cost you more over time.

Additional Information

Additional Purchase and Sale Information

Fund shares are listed for secondary trading on Cboe BZX Exchange, Inc. and individual fund shares may only be purchased and sold in the secondary market through a broker-dealer. The secondary markets are closed on weekends and also are generally closed on the following holidays: New Year's Day, Dr. Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day (observed), Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. An exchange may close early on the business day before certain holidays and on the day after Thanksgiving Day. Exchange holiday schedules are subject to change without notice. If you buy or sell fund shares in the secondary market, you will pay the secondary market price for fund shares. In addition, you may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

The trading prices of fund shares will fluctuate continuously throughout trading hours based on market supply and demand rather than the fund's net asset value, which is calculated at the end of each business day (normally 4:00 p.m. Eastern time). Fund shares will trade on an exchange at market prices that may be above (i.e., at a premium) or below (i.e., at a discount), to varying degrees, the daily net asset value of fund shares. The trading prices of fund shares may deviate significantly from the fund's net asset value during periods of market volatility. Given, however, that fund shares can be issued and redeemed daily in Creation Units, the Adviser believes that large discounts and premiums to net asset value should not be sustained over long periods. Each business day, the following information will be available at www.bny.com/investments with respect to the fund: (i) information for each portfolio holding that will form the basis of the next calculation of the fund's net asset value per fund share; (ii) the fund's net asset value per fund share, market price, and premium or discount, each as of the end of the prior business day; (iii) a table showing the number of days the fund's shares traded at a premium or discount during the most recently completed calendar year and the most recently completed calendar quarter since that year (or the life of the fund, if shorter); (iv) a line graph showing fund share premiums or discounts for the most recently completed calendar year and the most recently completed quarter since that year (or the life of the fund, if shorter); (v) the fund's median bid-ask spread over the last thirty calendar days (when available); and (vi) if during the past year the fund's premium or discount was greater than 2% for more than seven consecutive trading days, a statement that the fund's premium or discount, as applicable, was greater than 2% and a discussion of the factors that are reasonably believed to have materially contributed to the premium or discount.

Cboe BZX Exchange, Inc. will disseminate, every fifteen seconds during the regular trading day, an indicative optimized portfolio value (IOPV) relating to the fund. The IOPV calculations are estimates of the value of the fund's net asset value per fund share. Premiums and discounts between the IOPV and the market price may occur. This should not be viewed as a "real-time" update of the net asset value per fund share. The IOPV is based on the current market value of the published basket of portfolio securities and/or cash required to be deposited in exchange for a Creation Unit and does not necessarily reflect the precise composition of the fund's actual portfolio at a particular point in time. Moreover, the IOPV is generally determined by using current market quotations and/or price quotations obtained from broker-dealers and other market intermediaries and valuations based on current market rates. The IOPV may not be calculated in the same manner as the net asset value, which (i) is computed only once a day, (ii) unlike the calculation of the IOPV, takes into account fund expenses, and (iii) may be subject, in accordance with the requirements of the 1940 Act, to fair valuation at different prices than those used in the calculations of the IOPV. The IOPV price is based on quotes and closing prices from the securities' local market converted into U.S. dollars at the current currency rates and may not reflect events that occur subsequent to the local market's close. Therefore, the IOPV may not reflect the best possible valuation of the fund's current portfolio. Neither the fund nor the Adviser or any of their affiliates are involved in, or responsible for, the calculation or dissemination of such IOPVs and make no warranty as to their accuracy.

The vast majority of trading in fund shares occurs on the secondary market and does not involve the fund directly. Fund shares may be purchased and redeemed directly from the fund only in Creation Units by Authorized Participants, principally in exchange for cash. Cash purchases and/or redemptions of Creation Units can result in disruption of portfolio management, dilution to the fund and increased transaction costs, which could negatively impact the fund's ability to achieve its investment objective, and may lead to the realization of capital gains. These consequences may increase as the frequency of cash purchases and redemptions of Creation Units by Authorized Participants increases. Because purchase and redemption transactions with Authorized Participants are an essential part of the ETF process and may help keep ETF trading prices in line with net asset value, the fund accommodates frequent purchases and redemptions by Authorized Participants and the board has not adopted policies and procedures with respect to frequent purchases and redemptions of fund shares. To help mitigate the costs associated with cash transactions, the fund

imposes additional transaction fees on purchases and redemptions of Creation Units in cash. The fund reserves the right to not accept creation orders.

Portfolio Holdings Disclosure

The fund's portfolio holdings disclosure policy is described in the SAI. In addition, the identities and quantities of the securities held by the fund are disclosed on the fund's website, www.bny.com/investments.

Distributions

Each fund shareholder is entitled to the shareholder's pro rata share of the fund's income and net realized gains on the fund's investments. The fund intends to pay out substantially all of its net earnings to its shareholders as "distributions."

The fund may earn income dividends from stocks, interest from debt securities and, if participating, securities lending income. These amounts, net of expenses and taxes (if applicable), are passed along to fund shareholders as "income dividend distributions." The fund will generally realize short-term capital gains or losses whenever it sells or exchanges assets held for one year or less. Net short-term capital gains will generally be treated as ordinary income when distributed to shareholders. The fund will generally realize long-term capital gains or losses whenever it sells or exchanges assets held for more than one year. Net capital gains (the excess of the fund's net long-term capital gains over its net short-term capital losses) are distributed to shareholders as "capital gain distributions."

Income dividend distributions, if any, for the fund are generally distributed to shareholders quarterly, but may vary significantly from period to period. Net capital gains for the fund are distributed at least annually. Dividends may be declared and paid more frequently or at any other time to comply with the distribution requirements of the Internal Revenue Code of 1986, as amended (the "Code").

If you buy shares of the fund when the fund has realized but not yet distributed income or capital gains, you will be "buying a dividend" by paying the full price for the shares and then receiving a portion back in the form of a taxable distribution.

Distributions in cash may be reinvested automatically in additional whole fund shares only if the broker through whom you purchased fund shares makes such option available. Distributions which are reinvested will nevertheless be taxable to the same extent as if such distributions had not been reinvested (unless you are investing through an IRA, retirement plan or other U.S. tax-advantaged investment plan).

Additional Tax Information

The following discussion is a summary of certain important U.S. federal income tax considerations generally applicable to an investment in the fund. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a comprehensive explanation of the tax treatment of the fund, or the tax consequences of an investment in the fund. An investment in the fund may have other tax implications. Please consult a tax advisor about the applicable federal, state, local, foreign or other tax laws. Investors, including non-U.S. investors, may wish to consult the SAI tax section for additional disclosure.

Tax Status of the Fund. The fund intends to elect and intends to qualify each year for the special tax treatment afforded a regulated investment company ("RIC") under the Code. If the fund meets certain minimum distribution requirements, as a RIC it is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, if the fund fails to qualify as a RIC or to meet minimum distribution requirements, it would result in fund-level taxation if certain relief provisions were not available, and consequently a reduction in income available for distribution to shareholders. Unless you are a tax-exempt entity or your investment in the fund's shares is made through a tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when the fund makes distributions, you sell fund shares and you purchase or redeem Creation Units (Authorized Participants only).

Taxes on Distributions. In general, distributions are subject to federal income tax when they are paid, whether the distributions are taken in cash or reinvested in the fund. The income dividends and short-term capital gains distributions received from the fund will be taxed as either ordinary income or qualified dividend income. Distributions from the fund's short-term capital gains are generally taxable as ordinary income. Subject to certain limitations, dividends that are reported by the fund as qualified dividend income are taxable to non-corporate shareholders at rates of up to 20%. Any distributions of the fund's net capital gains are taxable as long-term capital gain regardless of how long fund shares have been owned by an investor. Long-term capital gains are generally taxed to non-corporate shareholders at rates of up to 20%. Distributions in excess of the fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of the investor's basis in the fund's shares, and, in general, as capital gain thereafter.

In general, dividends may be reported by the fund as qualified dividend income if they are attributable to qualified dividend income received by the fund, which, in general, includes dividend income from taxable U.S. corporations and certain foreign corporations (i.e., certain foreign corporations incorporated in a possession of the United States or in certain countries with a comprehensive tax treaty with the United States, and certain other foreign corporations if the stock with respect to which the dividend is paid is readily tradable on an established securities market in the United States), provided that the fund satisfies certain holding period requirements in respect of the stock of such corporations and has not hedged its position in the stock in certain ways. A dividend generally will not be treated as qualified dividend income if the dividend is received with respect to any share of stock held by the fund for fewer than 61 days during the 121-day period beginning at the date which is 60 days before the date on which such share becomes ex-dividend with respect to such dividend. These holding period requirements will also apply to investor ownership of fund shares. Holding periods may be suspended for these purposes for stock that is hedged. Additionally, income derived in connection with the fund's securities lending activities will not be treated as qualified dividend income. As a result of the fund's investment strategies, the fund does not anticipate that it will distribute dividends eligible to be treated as qualified dividend income.

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% tax on all or a portion of their "net investment income," which includes taxable interest, dividends and certain capital gains (generally including capital gain distributions and capital gains realized upon the sale of fund shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from the fund that are attributable to dividends received by the fund from U.S. corporations, subject to certain limitations. As a result of the fund's investment strategies, the fund does not anticipate that it will distribute dividends eligible for the dividends-received deduction for corporations.

If an investor lends fund shares pursuant to securities lending arrangements, the investor may lose the ability to treat fund dividends (paid while the fund shares are held by the borrower) as qualified dividend income. Please consult a financial intermediary or tax advisor to discuss the particular circumstances.

A RIC that receives business interest income may pass through its net business interest income for purposes of the tax rules applicable to the interest expense limitations under Section 163(j) of the Code. A RIC's total "Section 163(j) Interest Dividend" for a tax year is limited to the excess of the RIC's business interest income over the sum of its business interest expense and its other deductions properly allocable to its business interest income. A RIC may, in its discretion, designate all or a portion of ordinary dividends as Section 163(j) Interest Dividends, which would allow the recipient shareholder to treat the designated portion of such dividends as interest income for purposes of determining such shareholder's interest expense deduction limitation under Section 163(j) of the Code. This can potentially increase the amount of a shareholder's interest expense deductible under Section 163(j) of the Code. In general, to be eligible to treat a Section 163(j) Interest Dividend as interest income, you must have held your shares in the fund for more than 180 days during the 361-day period beginning on the date that is 180 days before the date on which the share becomes ex-dividend with respect to such dividend. Section 163(j) Interest Dividends, if so designated by the fund, will be reported to your financial intermediary or otherwise in accordance with the requirements specified by the Internal Revenue Service (IRS).

In general, your distributions are subject to federal income tax for the year in which they are paid. However, distributions paid in January, but declared by the fund in October, November or December of the previous year, payable to shareholders of record in such a month, may be taxable to an investor in the calendar year in which they were declared.

A distribution will reduce the fund's net asset value per fund share and may be taxable to a shareholder as ordinary income or capital gain even though, from an investment standpoint, the distribution may constitute a return of capital. You should note that if you purchase shares of the fund just before a distribution, the purchase price would reflect the amount of the upcoming distribution. In this case, you would be taxed on the entire amount of the distribution received, even though, as an economic matter, the distribution simply constitutes a return of your investment. This is known as "buying a dividend" and generally should be avoided by taxable investors.

The fund (or your broker) will inform you of the amount of your ordinary income dividends, qualified dividend income, and net capital gain distributions shortly after the close of each calendar year.

Foreign Income Taxes. Investment income received by the fund from sources within foreign countries may be subject to foreign income taxes withheld at the source. The United States has entered into tax treaties with many foreign countries which may entitle the fund to a reduced rate of such taxes or exemption from taxes on such income. It is impossible to determine the effective rate of foreign tax for the fund in advance since the amount of the assets to be invested within various countries is not known. If more than 50% of the total assets of the fund at the close of its taxable year consist of certain foreign stocks or securities, the fund may elect to "pass through" to shareholders certain foreign income taxes

(including withholding taxes) paid by the fund. If the fund makes such an election, the shareholder will be considered to have received as an additional dividend the shareholder's share of such foreign taxes, but the shareholder may be entitled to either a corresponding tax deduction in calculating the shareholder's taxable income, or, subject to certain limitations, a credit in calculating the shareholder's federal income tax. No deduction for such taxes will be permitted to individuals in computing their alternative minimum tax liability. If the fund does not so elect, the fund will be entitled to claim a deduction for certain foreign taxes incurred by the fund. Under certain circumstances, if the fund receives a refund of foreign taxes paid in respect of a prior year, the value of fund shares could be reduced or any foreign tax credits or deductions passed through to shareholders in respect of the fund's foreign taxes for the current year could be reduced.

Taxes on Share Sales. Each sale of shares of the fund will generally be a taxable event. Assuming a shareholder holds shares of the fund as capital assets, any capital gain or loss realized upon a sale of fund shares is generally treated as long-term capital gain or loss if fund shares have been held for more than one year and as short-term capital gain or loss if fund shares have been held for one year or less, except that any capital loss on the sale of fund shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such fund shares. Any loss realized on a sale will be disallowed to the extent shares of the fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of such shares. The ability to deduct capital losses may be limited.

Taxes on Creations and Redemptions of Creation Units. An Authorized Participant who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time and the exchanger's aggregate basis in the securities surrendered plus any cash paid for the Creation Units. An Authorized Participant who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the aggregate market value of the securities and the amount of cash received. The IRS, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" (for an Authorized Participant who does not mark-to-market its holdings), or on the basis that there has been no significant change in economic position. Authorized Participants exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

When creating or redeeming Creation Units, a confirmation statement will be sent showing the number of fund shares purchased or sold with the applicable share price.

The trust, on behalf of the fund, has the right to reject an order for Creation Units if the purchaser (or a group of purchasers) would, upon obtaining the fund shares so ordered, own 80% or more of the outstanding shares of the fund and if, pursuant to Section 351 of the Code, the fund would have a basis in the securities different from the market value of the securities on the date of deposit. The trust also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determination. If the trust does issue Creation Units to a purchaser (or a group of purchasers) that would, upon obtaining the fund shares so ordered, own 80% or more of the outstanding shares of the fund, the purchaser (or group of purchasers) generally will not recognize gain or loss upon the exchange of securities for Creation Units.

If the fund redeems Creation Units in cash in addition to, or in place of, the delivery of a basket of securities, it may bear additional costs and recognize more capital gains than it would if it redeems Creation Units in-kind.

Certain Tax-Exempt Investors. The fund, if investing in certain limited real estate investments, may be required to pass through certain "excess inclusion income" and other income as "unrelated business taxable income" (UBTI). Prior to investing in the fund, tax-exempt investors sensitive to UBTI should consult their tax advisors regarding this issue and IRS pronouncements addressing the treatment of such income in the hands of such investors. Certain tax-exempt educational institutions will be subject to an excise tax on net investment income. For these purposes, certain dividends and capital gain distributions, and certain gains from the disposition of fund shares (among other categories of income), are generally taken into account in computing a shareholder's net investment income.

Non-U.S. Investors. Ordinary income dividends paid by the fund to shareholders who are non-resident aliens or foreign entities will generally be subject to a 30% U.S. withholding tax (other than distributions reported by the fund as interest-related dividends and short-term capital gain dividends), unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business. In general, the fund may report interest-related dividends to the extent of its net income derived from U.S.-source interest, and the fund may report short-term capital gain dividends to the extent its net short-term capital gain for the taxable year exceeds its net long-term capital loss. Gains on the sale of fund shares and dividends that are, in each case, effectively connected with the conduct of a trade or business within the U.S. will generally be subject to U.S. federal net income taxation at regular income tax rates.

Unless certain non-U.S. entities that hold fund shares comply with IRS requirements that will generally require them to report information regarding U.S. persons investing in, or holding accounts with, such entities, a 30% withholding tax may apply to distributions payable to such entities. A non-U.S. shareholder may be exempt from the withholding

described in this paragraph under an applicable intergovernmental agreement between the U.S. and a foreign government, provided that the shareholder and the applicable foreign government comply with the terms of such agreement.

Backup Withholding. The fund will be required in certain cases to withhold (as "backup withholding") on amounts payable to any shareholder who (1) has provided the fund either an incorrect tax identification number or no number at all, (2) is subject to backup withholding by the IRS for failure to properly report payments of interest or dividends, (3) has failed to certify to the fund that such shareholder is not subject to backup withholding, or (4) has not certified that such shareholder is a U.S. person (including a U.S. resident alien). The backup withholding rate is currently 24%. Backup withholding will not be applied to payments that have been subject to the 30% withholding tax on shareholders who are neither citizens nor permanent residents of the United States.

Certain Potential Tax Reporting Requirements. Under U.S. Treasury regulations, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder (or certain greater amounts over a combination of years), the shareholder must file with the IRS a disclosure statement on Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance shareholders of a RIC are not excepted. Significant penalties may be imposed for the failure to comply with the reporting requirements. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Other Tax Issues. The fund may be subject to tax in certain states where the fund does business (or is treated as doing business as a result of its investments). Furthermore, in those states which have income tax laws, the tax treatment of the fund and of fund shareholders with respect to distributions by the fund may differ from federal tax treatment.

The foregoing discussion summarizes some of the consequences under current federal income tax law of an investment in the fund. It is not a substitute for personal tax advice. Consult a personal tax advisor about the potential tax consequences of an investment in the fund under all applicable tax laws.

General Information

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including shares of the fund. However, Rule 12d1-4 permits registered investment companies to invest in the fund beyond the limits in Section 12(d)(1), subject to certain terms and conditions, including that such investment companies enter into an agreement with the trust.

Financial Highlights

Because the fund has not commenced operations prior to the date of this prospectus, financial highlights are not available.

NOTES

NOTES

For More Information

BNY Mellon Global Fixed Income ETF

More information on the fund is available free upon request, including the following:

Annual/Semi-Annual Report and Financial Statements

The fund's annual and semi-annual reports describe the fund's performance and recent market conditions, economic trends and fund strategies that significantly affected the fund's performance during the period covered by the report. The fund's Form N-CSR contains the fund's financial statements and lists the fund's portfolio holdings. The fund's most recent annual and semi-annual reports and other information, such as the fund's financial statements, will be available at www.bny.com/investments.

Statement of Additional Information (SAI)

The SAI provides more details about the fund and its policies. A current SAI is available at www.bny.com/investments and is on file with the Securities and Exchange Commission (SEC). The SAI is incorporated by reference (and is legally considered part of this prospectus).

Portfolio Holdings

BNY Mellon ETF Trust II discloses, at www.bny.com/investments, the identities and quantities of the securities held by the fund. A complete description of the fund's policies and procedures with respect to the disclosure of the fund's portfolio securities is available in the fund's SAI.

How to Request the SAI, the Fund's Annual and Semi-Annual Reports, and Other Information about the Fund, and to Make Shareholder Inquiries

By telephone (toll-free). Call 1-833-ETF-BNYM (383-2696) (inside the U.S. only)

By mail.

BNY Mellon ETF Trust II
