The performance data quoted represents past performance, which is no guarantee of future results. Share price and investment return fluctuate, and an investor's shares may be worth more or less than original cost upon redemption. Current performance may be lower or higher than the performance quoted. Data assumes the reinvestment of dividends and capital gains, if any. Performance for periods less than 1 year is not annualized. Go to [bny.com/investments](https://www.bny.com/investments) for the fund's most recent month-end returns.

[†]Gross expenses is the total annual operating expense ratio for the fund, before any fee waivers or expense reimbursements. ^{††}Net Expenses is the total annual operating expense ratio for the fund, after any applicable fee waivers or expense reimbursements. The Net Expenses is the actual fund expense ratio applicable to investors. Not all classes of shares may be available to all investors or through all broker-dealer platforms. [†]Source: FactSet.

¹Investors should consider, when deciding whether to purchase a particular class of shares, the investment amount, anticipated holding period and other relevant factors. ²Portfolio composition is subject to change at any time. ³Source: Walter Scott.

Goal/Approach

The fund seeks long-term total return. To pursue this goal, the fund normally invests at least 80% of its net assets, plus any borrowings for investment purposes, in stocks. The fund normally invests primarily in foreign companies located in the developed markets. Examples of developed markets are Canada, Japan, Australia, Hong Kong and Western Europe.

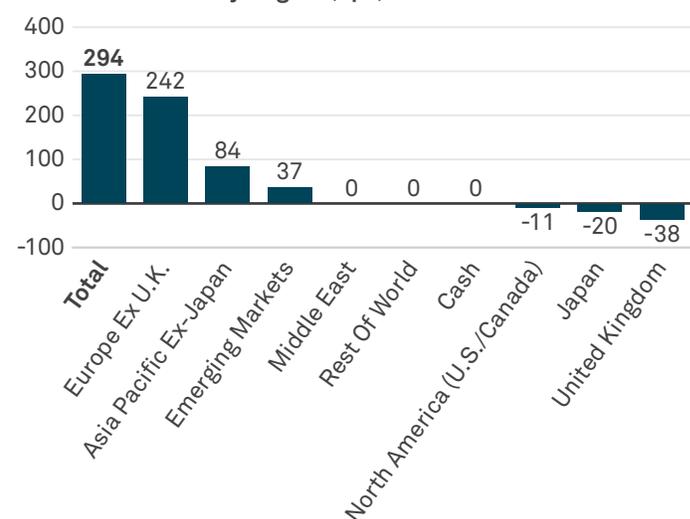

Investment Process/Philosophy

Walter Scott invests in companies whose fundamental strengths offer the potential for sustainable growth.

- **Objective:** Real returns over the long term
- **Principle:** Returns derived from investing in the shares of a company will reflect the growth generated by that business
- **Approach:** Bottom-up, fundamental, research driven, team focus
- **Target:** Companies capable of long-term sustainable growth

Risks

Equities are subject to market, market sector, market liquidity, issuer, and investment style risks, among other factors, to varying degrees. Investing in **foreign denominated and/or domiciled securities** involves special risks, including changes in currency exchange rates, political, economic, and social instability, limited company information, differing auditing and legal standards, and less market liquidity. These risks generally are greater with emerging market countries. **Small and midsized company stocks** tend to be more volatile and less liquid than larger company stocks as these companies are less established and have more volatile earnings histories.

Index Definitions

The **MSCI EAFE Index (Europe, Australasia, Far East)** is a free float-adjusted, market capitalization-weighted index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. Investors cannot invest directly in any index.

Definitions

Beta is a measure of a security's or portfolio's volatility, or systematic risk. **Alpha** is a measure of selection risk in relation to the market. A positive alpha is the extra return awarded to the investor for taking a risk instead of accepting the market. **Standard deviation** is a statistical measure of the degree to which an individual portfolio return tends to vary from the mean, based on the entire population. **R-squared** is a statistical measure that represents the percentage of a fund's or security's movements that are explained by movements in a

benchmark index. **Information ratio** measures a portfolio manager's ability to generate excess returns relative to a benchmark. **Sharpe ratio** is a risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better. **Price-to-earnings (P/E)** is the ratio of the market price of a firm's common stock to its current (or predicted) earnings per share. **Upside capture ratio** measures a manager's performance in up markets. An up market is defined as those periods (months or quarters) in which market return is greater than 0. **Price-to-book value (P/B)** is a ratio used to compare a stock's market value with its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value (assets minus liabilities). **Downside capture ratio** measures a manager's performance in down markets. A down market is defined as those periods (months or quarters) in which market return is less than 0. **Portfolio Turnover** is a measure of the trading activity in an investment portfolio—how often securities are bought and sold by a portfolio. **Return on equity** is the adjusted profit of a company divided by its equity. **Weighted Average Market Cap** is the average market capitalization of corporations in a fund or index, weighted by the percentage of the holding in the fund or index. A basis point (**BPS**) is a unit of measurement used to describe changes in the value of a financial instrument as a percentage. One basis point is equal to 0.01%, or one-hundredth of a percentage point.

NAV is Net Asset Value. **FDIC** is Federal Deposit Insurance Corp. **YTD** is Year to Date. **CFA®** and **Chartered Financial Analyst®** are registered trademarks owned by the CFA Institute. **Avg** is average. **B** is billion. **Q** is Quarter.

Investors should consider the investment objectives, risks, charges and expenses of a mutual fund carefully before investing. To obtain a prospectus, or a summary prospectus, if available, that contains this and other information about a fund, contact your financial professional. For more information, call 1-800-373-9387 or visit bny.com/investments. Read the prospectus carefully before investing. Investors should discuss with their financial professional the eligibility requirements for Class I and Y shares, which are available only to certain eligible investors, and the historical results achieved by the fund's respective share classes.
