CPI RISES BUT WE EXPECT FED TO CUT

Sept.12, 2025

Consumer prices rose 0.4% in August, taking headline CPI from 2.7% to 2.9% year-on-year. Core prices rose 0.3% month-on-month in August, keeping core CPI at 3.1% year-on-year. While inflation remains stubborn, we do not believe it will be enough to cause the Fed to waiver over cutting rates next week.

Food prices rose 0.5% in August, driven by supply issues in beef and price rises in imported items like coffee. Elsewhere, energy inflation was back in positive territory at 0.7% in August, driven by a 1.9% rise in gasoline prices.

Figure 1: Food and shelter inflation helps push CPI higher

Bureau of Labor Statistics, Macrobond, Insight, September 2025. Charts are provided for illustrative purposes only.

Meanwhile core goods prices rose by 0.3% in August, mostly driven by used cars, which rose 1%. Tariff-related goods inflation moderated in August, at 0.2% month-on-month (Figure 2), albeit with notable price rises in relatively small components like televisions (up 2.5%, the fastest since 2021), sewing machines (up 9.1%, the fastest since 2020) and jewelry and watches (up 5.5%, the fastest on record).

Figure 2: Tariff-related goods prices rose again albeit at a moderate pace

Bureau of Labor Statistics, Macrobond, Insight, September 2025. The index includes goods with high levels of imported content, such as apparel, consumer electronics, toys, household furnishings and supplies, motor vehicle parts and equipment, and is weighted according to the CPI basket weights. Charts are for illustrative purposes only.

"STICKY" CORE SERVICES CATEGORIES PROVE STUBBORN

Disinflation in the slow-moving core services CPI components stalled somewhat in August, although we believe the overall trend remains in place.

Shelter (the largest component of the CPI index) rose 0.4% in August, largely due to a pickup in "lodging away from home" category, but notably continued to moderate on a year-on-year basis, reaching 3.6%, the lowest level since October 2021. Excluding shelter, headline CPI was 2.5%.

Elsewhere, "supercore" services (which exclude food, energy and rental categories) remained at 3.2% year-on-year. Transportation services remained relatively high, driven by a 5.9% increase in airline fares in August (the fastest since 2022) and a 5% rise in motor vehicle repair (the fastest on record).

THE FED WILL LIKELY "LOOK THROUGH" ABOVE-TARGET INFLATION

Although inflation remains above-target for now, we believe the Fed will execute a 25 basis points (bp) cut at its next policy meeting, and two further cuts are priced by the end of 2025. Given recent weakness in employment indicators, we expect the Fed will be focused on preventing the labor market from tipping into a contraction and therefore mitigating the threat of a vicious cycle of job losses.

Although continued elevated inflation could complicate the Fed's hiking cycle looking beyond September, we believe that disinflationary forces remain in play. With rates on a downward trend, we believe it remains a good time for investors to consider locking in yields in fixed income assets.

A basis point (bp) is one-hundredth of a percentage point (0.01%). The Consumer Price Index (CPI) measures the monthly change in prices paid by U.S. consumers. The Bureau of Labor Statistics (BLS) calculates the CPI as a weighted average of prices for a basket of goods and services representative of aggregate U.S. consumer spending. PCE inflation is a measure of how prices for goods and services change over time, as tracked by the Personal Consumption Expenditures (PCE) Price Index. The PCE is a key indicator of inflation in the United States. Headline CPI is the raw inflation figure reported through the Consumer Price Index (CPI) monthly. Core CPI excludes the more volatile food and energy categories. Sticky inflation refers to a persistent economic scenario where prices for goods and services do not adjust quickly to changes in supply and demand dynamics. Supercore inflation equals the inflation of a basket of goods and services, minus the food and energy inflation, and minus the housing inflation.

BNY Investments is one of the world's leading investment management organizations, encompassing BNY's affiliated investment management firms and global distribution companies. BNY is the corporate brand of The Bank of New York Mellon Corporation and may also be used to reference the corporation as a whole and/or its various subsidiaries generally.

Investment advisory services in North America are provided by Insight North America LLC, a registered investment adviser and regulated by the U.S. Securities and Exchange Commission (SEC). Insight North America LLC is associated with other global investment managers that also (individually and collectively) use the corporate brand Insight Investment and may be referred to as "Insight" or "Insight Investment."
