Cash and others includes currency hedging and commodities.

BNY MELLON MULTI-ASSET FUND RANGE

FUND	OBJECTIVES	BENCHMARK
BNY Mellon Multi-Asset Diversified Return Fund	To achieve long-term capital growth over a period of at least 5 years from a portfolio diversified across a range of assets. The Fund is managed to seek a return in excess of cash (SONIA (30-day compounded)) +3% per annum over five years before fees. In doing so, it aims to achieve a positive return on a rolling three year basis (meaning a period of three years, no matter which day you start on). However, a positive return is not guaranteed and a capital loss may occur.	The Fund will measure its performance before fees over a rolling 5-year basis against the Sterling Overnight Index Average (SONIA), compounded over 30 days, plus 3% per year as a target benchmark (the "Benchmark"). SONIA is the average interest rate banks pay to borrow pounds sterling overnight and is used as a proxy for the return on cash deposits. The 30-day rate is calculated by compounding the daily SONIA rates throughout the previous 30-day period. The Fund will use the Benchmark as a target for the Fund's performance to match or exceed because it is representative of sterling cash and the Fund's investment objective is to seek a return in excess of sterling cash +3% per annum. The Fund is actively managed, which means the Investment Manager has discretion over the selection of investments, subject to the investment objective and policies as disclosed in the Prospectus.
BNY Mellon Multi-Asset Income Fund	To achieve income together with the potential for capital growth over the long term (5 years or more).	The Fund is actively managed without benchmark-related constraints. The Fund will measure its performance against the UK Investment Association's Mixed Investment 40-85% Shares NR Sector Average as a comparator benchmark (the "Benchmark"). The Fund will use the Benchmark as an appropriate comparator because it includes a broad representation of funds with levels of equity and bond exposure similar to those of the Fund. The Fund is actively managed, which means the Investment Manager has absolute discretion to invest outside the Benchmark subject to the investment objective and policies disclosed in the Prospectus. While the Fund's holdings may include constituents of the Benchmark, the selection of investments and their weightings in the portfolio are not influenced by the Benchmark. The investment strategy does not restrict the extent to which the Investment Manager may deviate from the Benchmark. Note: Effective 1 August 2025, the fund's performance benchmark changed from a composite index comprising 60% MSCI AC World NR Index and 40% ICE Bank of America Global Broad Market GBP Hedged Index to the Investment Association's Mixed Investment 40-85% Shares NR Sector Average.
BNY Mellon Multi-Asset Moderate Fund	To achieve capital growth and income over the long term (5 years or more).	The Fund will measure its performance against the UK Investment Association's Mixed Investment 20-60% Shares NR Sector average, as a comparator benchmark (the "Benchmark"). The Fund will use the Benchmark as an appropriate comparator because it includes a broad representation of funds with levels of equity and bond exposure similar to those of the Fund. The Fund is actively managed, which means the Investment Manager has discretion over the selection of investments, subject to the investment objective and policies as disclosed in the Prospectus.
BNY Mellon Multi-Asset Balanced Fund	To achieve a balance between income and capital growth over the long term (5 years or more).	The Fund will measure its performance against the UK Investment Association Mixed Investment 40-85% Shares NR Sector average as a comparator benchmark (the "Benchmark"). The Fund will use the Benchmark as an appropriate comparator because it includes a broad representation of funds with levels of equity and bond exposure similar to those of the Fund. The Fund is actively managed, which means the Investment Manager has discretion over the selection of investments, subject to the investment objective and policies as disclosed in the Prospectus.
BNY Mellon Multi-Asset Growth Fund	To achieve capital growth and income over the long term (5 years or more).	The Fund will measure its performance against the UK Investment Association Flexible Investment NR Sector average as a comparator benchmark (the "Benchmark"). The Fund will use the Benchmark as an appropriate comparator because it includes a broad representation of funds with the same flexibility, in terms of equity and bond exposure, as the Fund. The Fund is actively managed, which means the Investment Manager has discretion over the selection of investments, subject to the investment objective and policies as disclosed in the Prospectus.

**Defaqto:** Defaqto map funds and MPS portfolios to 10 accumulation risk profiles. A rating of 1 represents the lowest risk; 10 indicates the highest risk. Within the risk profiles, Defaqto use the industry recognised Hymans Robertson strategic asset allocations. **Dynamic Planner:** Risk-profiling process is driven by rigorous analysis of the underlying asset mix of a fund, as well as considering factors such as the flexibility of the investment mandate, monthly trend analysis of the underlying asset constituents and observed performance. Once this analysis is complete, the data is calibrated to the underlying asset forecast assumptions of the Dynamic Planner model. The expected risk of the fund is then determined using a scale from 1 (lowest) to 10 (highest) which can then be aligned to client risk profiles. **RSMR:** RSMR takes a qualitative approach to fund rating. While past performance and risk measures play a role in fund rating, RSMR's research team relies on face-to-face meetings with fund managers and management teams across the globe to establish how they will continue to develop performance. **Square Mile:** Square Mile is an independent funds research company that 'rates' funds, and provides opinion. The ratings are a guide to the conviction that its analysts have in the ability of a fund manager to achieve their outcome objectives over the longer term. The ratings range from AAA, to AA and A for actively managed funds. Rated passive funds are awarded an R for recommended and some younger funds, with shorter track records, are afforded a PP rating, as a 'Positive Prospect'. **Synaptic:** The Synaptic Risk Rating Service is derived from the risk framework provided by Moody's Analytic's Stochastic engine. It has been created to provide advisers with more robust, quantitative measures for risk than is generally available, and provide the opportunity for them to move away from volatility based ratings. **FundCalibre:** FundCalibre ratings are awarded after an initial qualitative screening and further qualitative analysis. This is followed up by their research team interviewing the fund manager face-to-face to understand and assess the investment process and style. Finally, a peer group review is conducted and those funds, whose managers FundCalibre believe to be the most skillful are awarded an Elite Rating. **Oxford Risk:** Oxford Risk uses a quant risk model to determine the long-term risk of any fund or portfolio, providing a robust and reliable solution for mapping investors' risk profiles to suitable investments. **EV:** EV risk-rated fund service is an easy way for advisers to turn their risk questionnaire's output into suitable recommendations on the EV portal. For full ratings please check EV adviser portal.
